Overview

What belongs on an M-colors page?

Magenta, maroon, mauve, mint, moss, mustard, and midnight blue introduce a remarkably varied vocabulary. Some names are exact software tokens; others identify a paint product, a historical dye, a mineral, or a broad visual impression. This edition contains 2,342 source-specific digital records and 373 separately documented historical naming entries. It shows which kind of evidence supports each claim.

How to use this reference

Read the comparisons first, then search the directory by name, issuer, or code. The companion atlas displays every admitted digital record under one of twelve independently reviewed GKBook families. The offline HTML has search and family filters; CSV and JSON retain exact numerical values, source URLs, and limitations. Historical entries form a separate directory without invented RGB swatches.

The coverage boundary

This is an international, source-bounded reference, not a worldwide census of every color ever named. It covers the M subsets recovered from the named inventories, a bounded PPG page selection, one regional Jotun inventory, and specified software and historical sources. One explicitly marked MSU lookup alias is included. Source-specific identities are counted: the same label can represent several records, and several records can share one RGB triplet.

At a glance

Measure	This edition
Digital records	2,342; each source context counted once
Distinct displayed names / RGB triplets	1876 names / 2320 triplets
Evidence groups	23 source/system/version groups
Historical naming entries	373; no digital values invented
Held numerical records	145; excluded from the verified atlas
Alias rows combined	17; alternative names remain searchable in the data

A color name needs a source

Magenta has several documented identities

CSS magenta is #FF00FF, Crayola's Magenta preview is #F653A6, and the xkcd survey label magenta is #C20078. Benjamin Moore's Magenta, code 2077-10, is #9C284B. These differences do not make three of the four records erroneous. They show why the source belongs beside the name. The directory also distinguishes the Pantone TCX dealer context. [2, 12, 13, 16, 17]

An exact number can have a limited meaning

A formally defined CSS keyword is an exact software value. A paint maker's website may publish an exact digital preview without promising that a screen reproduces a physical painted surface. A dealer's internally consistent conversion is still a dealer conversion. Keep the issuer, market, code, system, edition, and evidence type together. [12, 14, 17, 30]

Multiple pages are not independent publishers

A catalog and its maker's product page can corroborate the same record within one issuer. They are not two independent authorities. This edition reports catalog-based and individual-page verification separately. It does not inflate the source count by treating every URL, locale, or software alias as an unrelated publisher.

Reading RGB and hexadecimal values

A worked example: CSS moccasin

Hexadecimal is base 16. In #RRGGBB, the three pairs encode red, green, and blue channels. CSS moccasin is #FFE4B5: FF = 15 × 16 + 15 = 255; E4 = 14 × 16 + 4 = 228; B5 = 11 × 16 + 5 = 181. Its RGB notation is therefore (255, 228, 181). Converting between these notations is exact arithmetic. [17]

The color space matters

The edition renders eight-bit web previews as sRGB and uses that encoding for calculations. A bare manufacturer RGB triplet is not a laboratory measurement of an unspecified surface. Display settings, profiles, ink, paper, finish, and illumination affect appearance. RGB coordinates are not paint-mixing percentages. [19, 30]

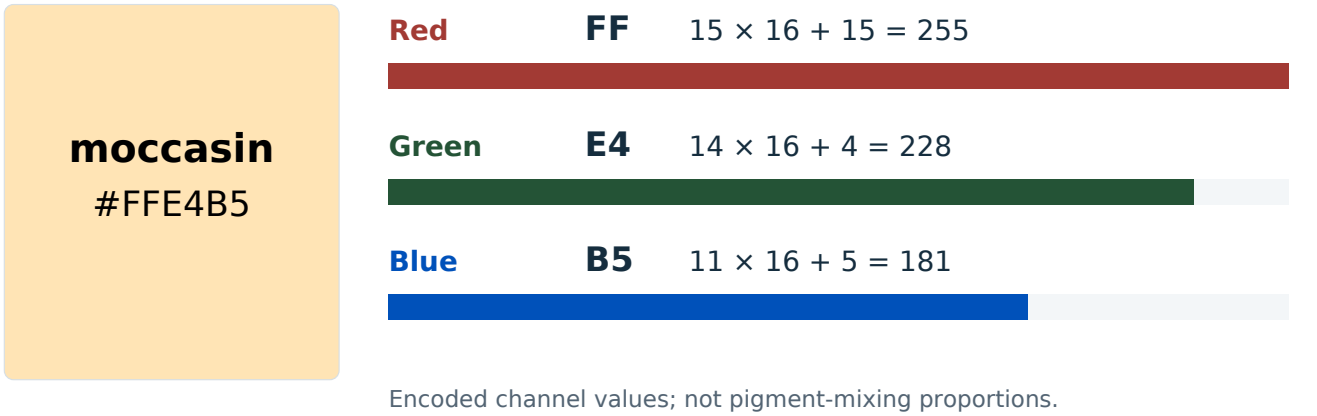

Keep reflectance and digital luminance separate

An LRV supplied by a paint source is retained as its reported metadata. It is not replaced by a luminance calculated from the website’s preview. Encoded sRGB channels also require linearization before the WCAG luminance calculation. Similar-looking numerical scales do not make these quantities interchangeable. [19, 20]

Maroon, medium names, CSS, and X11

CSS maroon and X11 maroon differ

CSS defines maroon as #800000. The consulted X.Org rgb release defines unnumbered maroon as #B03060. Crayola’s Maroon preview is #C32148. Each value is retained with its own identity. Choosing a familiar name from memory is not enough to establish which triplet a program or publication will use. [16–18]

Medium is part of the keyword

The fifteen CSS M keywords include mediumblue, mediumorchid, mediumpurple, mediumseagreen, and mediumvioletred. Their values come from the named-color table; they are not produced here by applying one “medium” lightness formula. CSS magenta is an alias of fuchsia, whose spelling belongs on the F page. X11’s numbered names, including magenta1–4, are not automatically CSS keywords. [17, 18]

A useful correction to the older list

The supplied M list gives one Moccasin value as #FAEBD7. In CSS that value belongs to antiquewhite; moccasin is #FFE4B5. The list also includes Medium Aquamarine #66DDAA, while CSS mediumaquamarine is #66CDAA. These are corrections to a claimed CSS mapping, not proof that no other naming convention could ever use those triplets. All 188 older rows remain accounted for in the reconciliation appendix. [17, 37]

How GKBook assigns shade families

An editorial grouping of visible patches

The twelve families are navigation aids. Every admitted exact RGB patch was visually inspected against a neutral surround, using hue, lightness, chroma, and neighboring appearances. Repeated identical RGB values share the same final family. Preliminary numerical bins organized the work; the final assignments reflect visual judgment. The review log preserves initial and final labels and review-board identifiers.

The name is evidence of identity, not a classification rule

Crayola places Magenta in its Red source category; GKBook places that visible preview in Pink. Crayola’s current Manatee preview is grouped in Gray. Little Greene’s Mid Bronze Green is Green, while Farrow & Ball’s Mortar Pink is a warm beige grouped in Brown. These editorial judgments never change the source RGB values. [7, 10, 16]

Some boundaries are deliberately broad

Brown includes beiges, earth colors, and selected ochres. White includes selected very pale tinted neutrals. Green includes olives and green-leaning teals; Blue includes cyan blues and selected blue teals. Purple is comparatively red-leaning or balanced, while Violet covers comparatively blue-leaning purples. Pink includes some muted and deep rose colors. A boundary judgment is not a new scientific standard.

Why the same word can land in several families

A maker may use a poetic or historical name, a merchandising category, or a collection-specific convention. Jotun’s MIDNIGHT is a subdued near-neutral preview; CSS midnightblue is a deep blue. Source categories and GKBook families remain separate fields so readers can see the difference rather than inherit an undocumented renaming. [15, 17]

GKBOOK / M-COLORS / FIGURE 3

Read the swatch, keep the name

A source label does not determine the editorial family

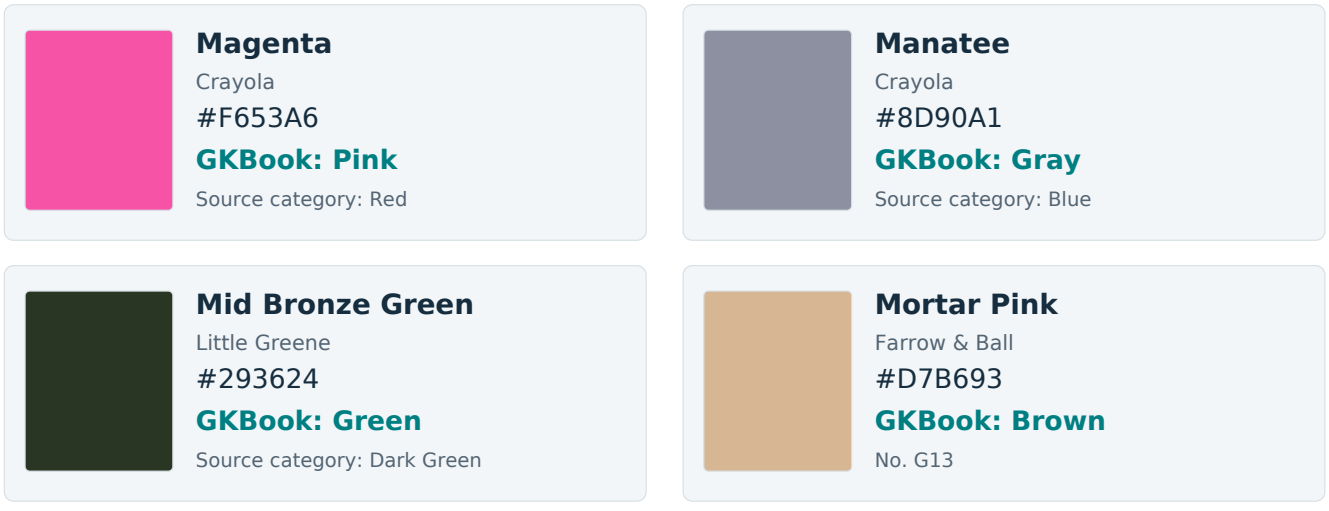

Figure 3. Read the swatch, keep the name Crayola’s Magenta source category is Red; its preview is grouped here in Pink. Names and numerical values remain unchanged.

Madder, mauveine, Maya blue, and malachite

Madder is a dye source, not a universal red chip

Madder is associated with roots of Rubia plants and coloring components including alizarin and purpurin. Its use as a dye or lake pigment involves material preparation and application conditions. A web color called Madder Lake is a separate numerical naming convention that needs its own source. The plant or pigment name alone does not establish #CC3336 or any other universal sRGB value. [23]

Mauve and mauveine answer different questions

Mauve can function as a broad color word or a modern product name. Mauveine identifies a historically important synthetic dye. Science History Institute dates William Henry Perkin’s discovery to 1856, during an investigation aimed at synthesizing quinine; the Smithsonian’s Perkin Mauve object provides a separate institutional record. That history does not turn every modern Mauve paint into the same dye or digital triplet. [24, 25]

Maya blue is a material composite

The Smithsonian research record describes Maya blue in terms of indigo and the clay mineral palygorskite; CAMEO provides a conservation reference for the pigment. Composition, preparation, substrate, and observation conditions matter. The widely circulated legacy value #73C2FB was not admitted here as a universal specification for the archaeological material. The historical or material term and a named web preview must remain distinct. [26, 36, 37]

Malachite is a mineral and a pigment material

CAMEO identifies malachite as a green basic copper carbonate mineral used as a pigment and notes that preparation affects appearance. The green of a mineral specimen is not a single encoded pixel value. Modern products named Malachite Green have their own documented values and codes; the directory does not infer those numbers from mineral chemistry. [27]

The historical directory preserves disagreements

NBS SP 440 assigns Magenta and Maroon to several descriptive regions depending on the earlier source. It also records historical Magnolia meanings beyond the familiar modern off-white paint association. The 373 entries in this edition preserve earlier-source keys, category numbers, and expanded category descriptions. No centroid hex values have been invented. Earlier books are represented through the NBS compilation, not claimed as separately examined originals. [22]

Named palettes, institutions, and versions

Marsala and Mocha Mousse need their system labels

Pantone’s issuer release identifies 18-1438 Marsala as its Color of the Year for 2015. X-Rite’s release identifies 17-1230 Mocha Mousse for 2025. The numerical previews admitted here come from the specifically labeled Columbia Omni Studio dealer tables. A source that establishes a name, code, or year does not thereby authenticate an RGB conversion found elsewhere. TCX and TPG contexts remain distinct. [12, 32, 33]

MSU Green is a transparent lookup alias

Michigan State University’s primary web palette names Spartan Green and specifies #18453B. Because the older M list uses MSU Green for that same value, this edition retains an explicitly marked editorial lookup alias. It does not say the university officially names the color “MSU Green,” and the JSON preserves Spartan Green as the source name. [31, 37]

Majorelle blue: association without an invented official number

The Musée Yves Saint Laurent Marrakech account documents the garden and its intense Majorelle blue. The consulted institutional page does not supply an RGB or hex specification. The name appears in the name-only supplement; the supplied #6050DC remains a legacy numerical claim requiring an appropriate source. [28, 37]

A changed preview is not proof of changed paint

Crayola’s current Manatee preview is #8D90A1; the older list supplies #979AAA. The Sherwin-Williams comparison also records 69 older/current-table differences, while eight older-only identities retain a historical qualifier. These are differences in published digital evidence. They do not establish a physical reformulation, a universal correction across issuers, or current commercial availability. [3, 16, 34, 37]

Readable color: a worked contrast example

Calculate from linearized sRGB

For each channel, divide its eight-bit value by 255. If the result is at most 0.04045, divide it by 12.92; otherwise use ((c + 0.055)/1.055)^2.4. Relative luminance is 0.2126R + 0.7152G + 0.0722B for these linearized components. Contrast is (lighter luminance + 0.05)/(darker luminance + 0.05). The data files provide reproducible ratios against opaque black and white. [20]

Compare the unrounded result with the threshold

WCAG AA generally requires at least 4.5:1 for normal text and 3:1 for large text, subject to the criterion’s exceptions. Large text means at least 18 points, or 14 points when bold. Rounding up a failing ratio does not make it pass. The moccasin example deliberately shows poor white-text contrast as well as the readable black-text alternative. [21]

Do not communicate by color alone

The swatches carry names, IDs, and hex values. The HTML uses labeled search and family controls, table headings, and a live result count. Contrast calculations apply to the specified opaque pair, not every transparent layer, background image, or interaction state. PDFs have selectable text, links, and bookmarks; full PDF/UA conformance is not asserted.

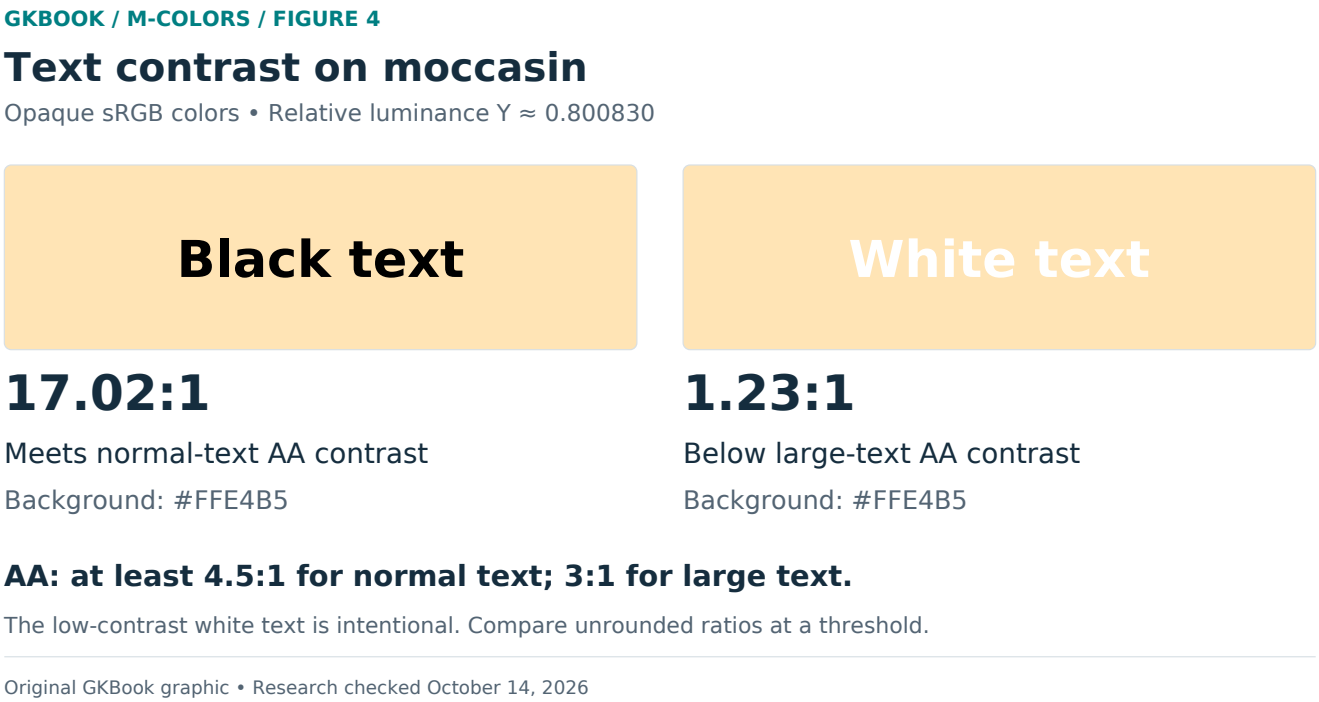

Figure 4. Text contrast on moccasin The same background supports one text color and fails another. Ratios follow WCAG 2.2; this calculation does not certify an entire interface.

Evidence quality and unresolved records

Internal conflicts are held rather than silently repaired

The dealer tables contain 145 M TPG rows whose RGB channels do not encode to their published hex. Those rows are excluded from the digital directory and atlas. The unresolved appendix preserves both original fields and shows the hex calculated from RGB solely as an arithmetic diagnostic. Neither column is declared the intended Pantone value. [12]

Absence of a number is a different issue

Five PPG pages and two Resene-hosted COLORSTEEL previews establish names but supply no recovered numerical specification. They remain name-only evidence. Editorial collection pages, an unavailable Dulux page, and an unavailable individual Sherwin-Williams page are separately logged. Mélange Green still has valid general-table numerical evidence. No missing value is filled by sampling a screenshot or borrowing a same-name product’s numbers. [3, 5, 6, 9]

Two Mission Browns illustrate collection context

Dulux’s Metalshield Mission Brown page gives #45342E, while its Traditionals Mission Brown page gives #45332E. Neither consulted page states an Atlas code. Both source contexts are retained with their exact fields and distinct URLs. Similarity is not sufficient reason to merge them or average their values. [9]

Unverified does not automatically mean false

The reconciliation classifies all 188 supplied older rows: 68 have an exact source-specific match in the consulted evidence, 54 share a name with different consulted values, three have a historical-name match without verified legacy hex, and 63 lack an admitted numerical match. The register states what remains unresolved and preserves every original value and family. It does not invent a replacement to make the list look complete. [37]

Source coverage and family guide

Source groups identify distinct evidence contexts. They are not a count of unrelated manufacturers. TCX/TPG dealer previews, the two Sherwin-Williams table contexts, and the institutional lookup alias are deliberately distinguishable. Counts below are after documented alias consolidation.

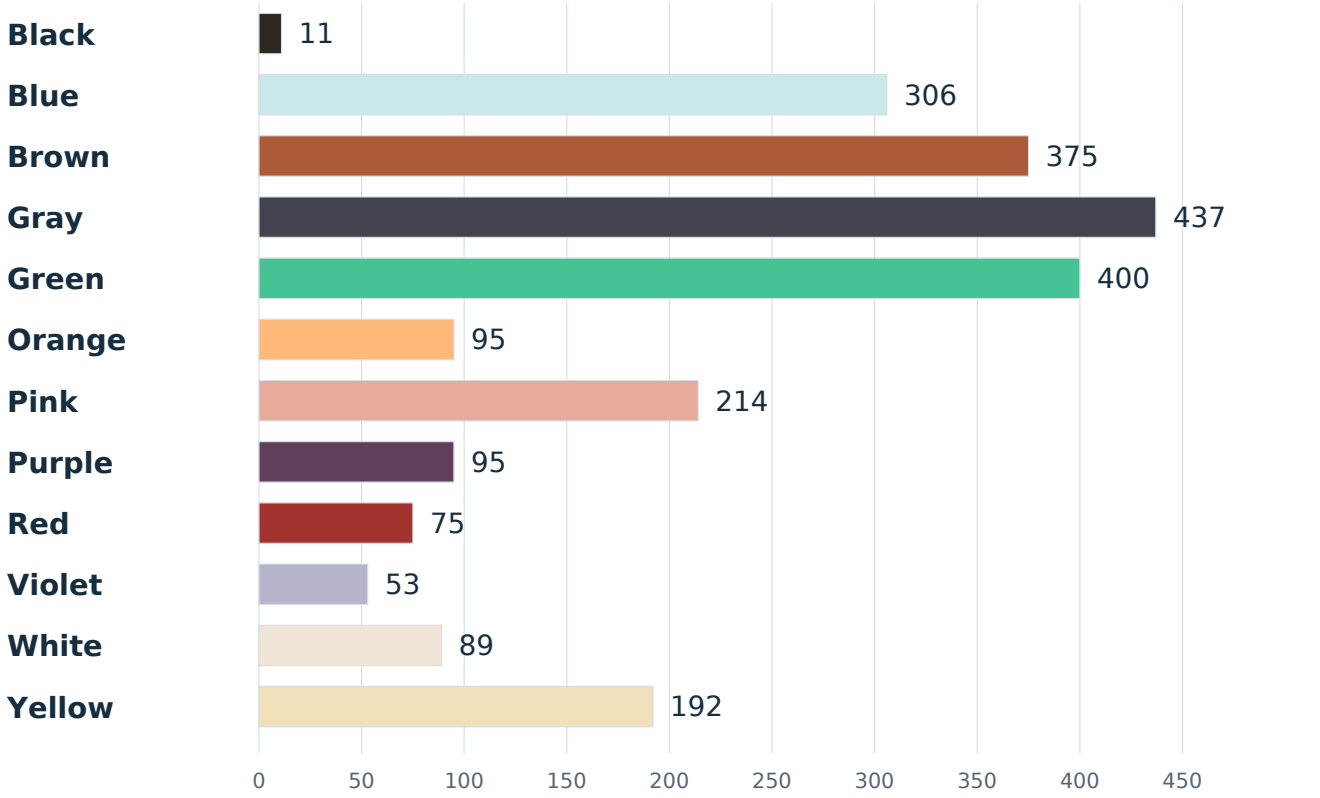

Source group	n	Consulted evidence
Dulux Australia	377	381 numerical URLs; four duplicate identities combined. [9]

Aliases and source versions

The 17 combined alias rows comprise 12 X11 case/spacing variants and five same-code Nerolac spelling pairs. The latter are Mademiselle/Mademoiselle and Gray/Grey forms of Magnet, Magnum, Metal, and Mute. Four duplicate Dulux page identities are logged separately; they are repeated URLs, not alternative color names. Numbered X11 labels remain separate. [9, 11, 18]

The source-version JSON preserves 69 code-matched differences between the older Sherwin-Williams table and retained general-table previews. Eight older-only identities remain explicitly qualified. These observations establish differences in published digital evidence, not a physical reformulation. [3, 34]

Historical M-color names

The 373 entries below are transcribed from the scanned principal M block on printed pages 124–127 (PDF pages 160–163) of NBS SP 440. They include M-initial modified forms printed within that block. Inverted index pointers and modified names beginning with another letter are excluded. One unclear scanned label was not admitted. This is a bounded transcription, not an exhaustive search for M words filed elsewhere in the entire dictionary. [22]

Each source assignment is expanded separately; a category region is not a unique RGB triplet. Optional-word brackets are expanded for lookup, and surviving sample locators appear in notes. Repeated Moonmist assignments are combined under one headword. Specification-qualified Maroon entries remain distinct from unqualified Maroon.

Name-only evidence and scope gaps

Name / source	Evidence boundary
Merino / COLORSTEEL® via Resene	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Mountain Blue / COLORSTEEL® via Resene	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Metallic Memories / PPG	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Misty Frost / PPG	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Mediterranean Night / PPG	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Mucho Mint / PPG	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Mingle / PPG	Named page located, but no numerical specification recovered. No replacement values were sampled from pixels or borrowed from another same-name color.
Majorelle Blue / Musée Yves Saint Laurent Marrakech	The museum documents the garden’s blue. No RGB/hex specification is stated in the consulted page.

Five PPG names and two COLORSTEEL names lack recovered numerical fields. Majorelle Blue has an institutional association without an RGB specification. Dulux collection and style pages do not count as individual color products. PPG coverage is a bounded page set; Jotun coverage is complete only for the consulted 989-record regional inventory. Reconciliation of the earlier M list

All 188 rows from the supplied m-colors.txt are accounted for below. An exact match establishes a documented source context, not the original author’s unstated intent. Same-name values from different issuers are not interchangeable. Original legacy families are preserved only as comparison input. [37]

Glossary

Term	Meaning
Color name	A linguistic label: broad, historical, source-specific, or formally defined.
Source-specific identity	A name within an issuer, system, code, collection, or version context.
Hexadecimal	Base-16 notation; #RRGGBB represents three eight-bit channels.
sRGB	The encoding used to render this edition’s web previews and calculate contrast.
LRV	A source-reported reflectance quantity; not interchangeable with preview luminance.
Shade family	GKBook’s editorial visual grouping, separate from a source category.
Alias	A documented alternative spelling or an explicitly identified lookup label.
Dealer approximation	A third-party numerical preview, not an authenticated licensed physical standard.
Historical category	An ISCC–NBS descriptive region; its number does not specify a unique RGB value.
Relative luminance	A weighted quantity calculated from linearized sRGB channels.
Contrast ratio	The WCAG luminance ratio for a specified foreground/background pair.
Held record	A source row excluded from the numerical atlas because its fields conflict.
Name-only evidence	Evidence for a name or association without an admitted numerical specification.
Legacy reconciliation	A row-by-row accounting of the supplied earlier list against this edition’s evidence.

Frequently asked questions

What are some colors that start with M?

Magenta, maroon, mauve, mint, moss, mustard, midnight blue, and moccasin are examples. For an exact digital value, choose a source-specific directory record rather than the word alone.

Are magenta and fuchsia the same?

They are exact aliases in CSS, both #FF00FF. That software rule does not make every maker’s Magenta and Fuchsia products identical. [17]

Is mauve always purple?

No universal catalog rule follows from the name. The xkcd mauve preview, for example, is a muted rose grouped here in Pink. Historical usages and manufacturer previews retain their own contexts. [13, 22]

How many M colors are there?

This edition contains 2,342 admitted digital records within its stated sources. The 373 historical entries are a separate lexical inventory, not additional verified RGB colors. Neither total is a worldwide census.

Can these hex values specify physical paint?

Use the current issuer’s product code, market, finish, and physical reference for that purpose. A web preview helps identify and illustrate a record; it does not replace the physical standard.

Why are some historical names missing swatches?

A pigment identity or historical descriptive region does not determine one modern sRGB triplet. Omitting an invented swatch preserves the actual evidence.

Are the graphics reusable?

The layouts, diagrams, labels, and atlas are original GKBook work. SVG and PNG files include source attribution. The bundle grants no rights in third-party marks, proprietary standards, or physical swatch collections.

Is the page already online?

The HTML is a complete offline publication file. No live website has been modified or published.
