Overview

What belongs on an N-colors page?

Navy, Naples yellow, Navajo white, neon green, nickel, and nutmeg lead into very different kinds of color vocabulary. A name may identify an exact software value, a product preview, a pigment, a historical usage, or an informal visual impression. This edition contains 656 source-specific digital records and 118 separately documented historical entries. The evidence type stays visible beside the name.

How to use this reference

Start with the comparisons and worked examples. Then use the alphabetical directory or the searchable offline page to find a name, source, or code. The companion atlas displays every admitted digital record in one of twelve reviewed GKBook families. CSV and JSON preserve exact numerical values, citations, source categories, and limitations. Historical entries have descriptive assignments, without invented digital swatches.

The coverage boundary

This international reference covers the N subsets recovered from the specified catalogs, a bounded PPG page selection, one regional Jotun inventory, and defined software and historical sources. It is not a worldwide census. North Texas Green appears as an explicitly marked lookup alias for an official UNT specification. A repeated label can represent several source identities, while several identities can share one RGB triplet.

A color name needs a source

Navy and Navy Blue have several documented values

CSS navy is #000080. Crayola’s current Navy Blue preview is #0066CC. The xkcd survey lists navy as #01153E and navy blue as #001146. These are separate source identities; a similar name is not proof that the triplets should agree. The comparison preserves both the exact spelling and the source. [13, 16, 17]

A software definition and a paint preview make different claims

A CSS keyword has an exact software definition. A paint maker’s exact website RGB value is a digital representation of a named product, not a promise of an identical physical appearance on every screen or painted surface. A dealer conversion has still another evidence boundary. Keep the issuer, code, market, system, and version beside the value. [12, 14, 17, 30]

Catalog checks are reported honestly

Behr, Benjamin Moore, Dunn-Edwards, Asian Paints, RAL, Jotun, Crayola, CSS, X11, and xkcd numerical evidence comes from the stated inventories. Individually retrieved pages supply the other current product previews. All 43 current Sherwin-Williams identities received individual-page checks; 37 also agree with the general RGB table. A catalog and its issuer’s page are corroboration within one publisher, not independent authorities. [1–18, 35]

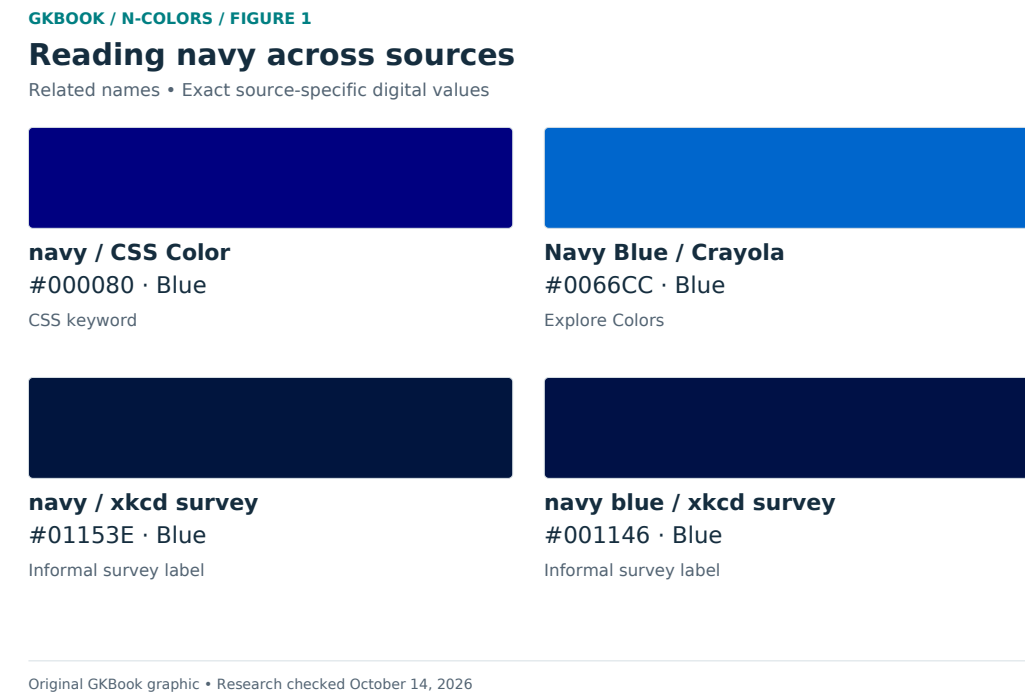

Figure 1. Reading navy across sources CSS navy, Crayola Navy Blue, and two distinct xkcd labels retain their own identities. Similar wording is not proof of numerical equivalence.

Reading RGB and hexadecimal values

A worked example: CSS navajowhite

In #RRGGBB, each hexadecimal pair encodes one eight-bit channel. CSS navajowhite is #FFDEAD. FF = 15 × 16 + 15 = 255; DE = 13 × 16 + 14 = 222; AD = 10 × 16 + 13 = 173. The decimal RGB triplet is therefore (255, 222, 173). This conversion is exact arithmetic, not a visual estimate. [17]

The encoding is part of the meaning

The supplied illustrations interpret eight-bit web previews as sRGB. The same three bare numbers in another color space can describe another appearance. Profiles, display settings, paper, ink, lighting, and finish also matter. RGB channels are not paint-mixing percentages, and a digital patch is not a spectral measurement of a material. [19, 30]

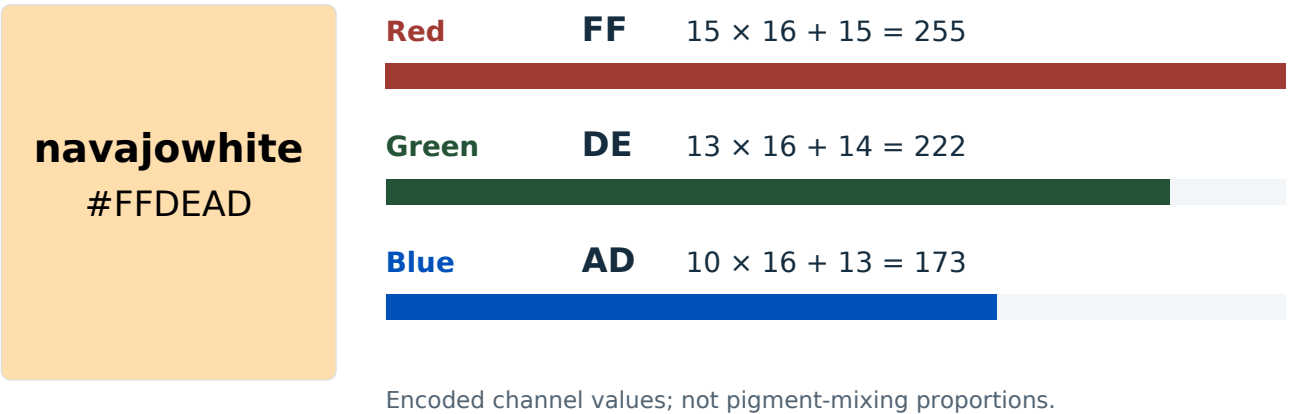

Keep LRV separate from preview luminance

Where a maker reports an LRV, the directory preserves it as source metadata. The calculated relative luminance used for screen contrast is a different quantity, derived from linearized sRGB. Similar scales do not make a website preview calculation interchangeable with a reported physical reflectance value. [19, 20]

Navajo white, navy, and software spelling

Two CSS keywords start with N

The consulted CSS Color 4 table has navy and navajowhite. Navy blue, neon blue, and numbered NavajoWhite variants are not additional CSS named keywords in that table. Use the defined token or an explicit numerical value when writing CSS; a familiar descriptive phrase alone does not create a keyword. [17]

X11 has its own documented entries

The consulted X.Org rgb 1.1.1 file gives navy and navy blue the same #000080 value. It also supplies unnumbered navajo white and NavajoWhite1 as #FFDEAD, followed by distinct NavajoWhite2, NavajoWhite3, and NavajoWhite4 values. Two case/spacing alias rows are consolidated; distinct lexical and numbered labels remain separate records even when their RGB values coincide. [18]

The word white does not force a pure-white patch

CSS navajowhite is a warm cream, grouped here in Yellow. Its name and source numbers remain unchanged. Paint products named Navajo White have their own issuer-specific previews, many of which fall into other editorial families. This is a navigation decision about visible digital patches, not a change to a standard or an inference about the name’s cultural origin. [1-3, 17]

Record / name	Source	Hex	Family
N0163 / navajowhite	CSS Color	#FFDEAD	Yellow

How GKBook assigns shade families

Review the patch, preserve its identity

Every admitted exact RGB patch was visually inspected against a neutral surround. Hue, lightness, chroma, and neighboring appearances informed the twelve family assignments. Numerical bins organized the review; they did not dictate its conclusions. The log covers all 656 records and all 652 distinct RGB patches. Identical triplets share one final family.

A source category is a separate field

Sherwin-Williams places Naval SW 6244 in its Neutral category. Its #2F3D4C preview is grouped here in Blue. Behr Natural White DC-005 is #F7F4E8 and falls in White. CSS navajowhite falls in Yellow. Neither a marketing category nor a color word is silently substituted for an independent visual judgment. [1, 3, 17]

Broad boundaries make the directory usable

Brown includes earthy colors, tans, beiges, and selected ochres. Gray includes near-neutrals with subdued undertones. White includes selected very pale tinted neutrals. Green covers olives and green teals; Blue includes cyan blues and selected blue teals. Purple is comparatively red-leaning or balanced; Violet is comparatively blue-leaning. Pink includes blushes and selected rose colors. These boundaries are editorial, not a new scientific classification.

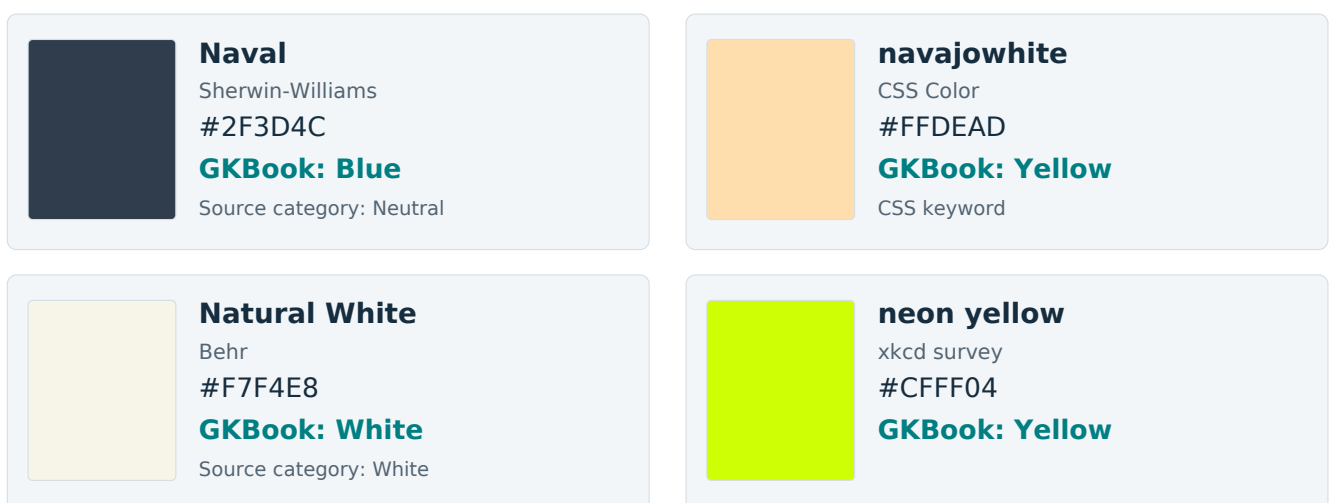

Neutral can mean different things

In an sRGB numerical context, equal red, green, and blue channel values describe the neutral axis. A maker's Neutral collection can also include visibly tinted colors. The historical term Neutral Tint has yet another context: NBS records a Maerz and Paul assignment to the Black category. None of these uses establishes one universal paint mixture or one universal hex value. [3, 19, 22]

Read the swatch, keep the name

A source label does not determine the editorial family

Figure 3. Read the swatch, keep the name Naval's source category is Neutral, while its preview is grouped here in Blue. CSS navajowhite is grouped in Yellow. Names and numerical values remain unchanged.

Naples yellow and naphthol reds

Naples yellow is also a pigment name

CAMEO identifies historical Naples yellow as a lead-antimonate pigment and describes variation in its appearance and manufacture. Modern materials sold under a familiar historical name can use different formulations. A pigment name therefore does not establish one universal sRGB triplet. Sherwin-Williams Naples Yellow SW 9021, #F6D58F, is a specific modern product preview with its own evidence. It is not a numerical definition of all Naples-yellow pigment. [3, 23]

A painting provides a concrete material example

The National Gallery's technical account of Gainsborough's *The Painter's Daughters chasing a Butterfly* identifies Naples yellow in Mary's dress and describes white mixed into paler passages. The source supports a material identification in a particular painting. It does not supply a universal web-color value for that pigment or for every painted passage containing it. [24]

Naphthol reds form a group

CAMEO documents several pigment identities under naphthol reds. Vibrantz separately identifies Naphthol AS pigments such as PR146, PR170, PR184, PR2, and PR266. These codes distinguish materials within the broader vocabulary. The class name is not a single red chip; composition, formulation, and application must be specified before making a material claim. The name-only supplement supplies this context without inventing RGB numbers. [27, 28]

Historical color regions preserve earlier disagreements

NBS SP 440 records Naples Yellow in several descriptive yellow regions. For New Blue, its Maerz and Paul assignments are strong blue and strong purplish blue, while its Plochere assignment is bluish white. Historical evidence can legitimately disagree because it represents different source systems. The 118-entry historical directory preserves those distinctions and expands the category numbers; it does not average them into a new swatch. [22]

Neon names and non-photo blue

Neon the element is not a green or blue paint standard

The Royal Society of Chemistry describes neon as a colorless gas under ordinary conditions that produces reddish-orange light in an electrical discharge. A commercial or informal color called neon green or neon blue is a naming convention, not a claim that pure neon gas emits that exact green or blue. [25]

Digital neon labels need their own sources

The xkcd dataset supplies neon blue #04D9FF, neon green #0CFF0C, neon pink #FE019A, neon purple #BC13FE, neon red #FF073A, and neon yellow #CFFF04. These are informal survey labels, not measured fluorescent-material standards. A bright RGB patch can illustrate the dataset value; it does not encode a material's complete fluorescence or illumination-dependent behavior. The survey is not a representative worldwide naming study. [13, 19, 29]

Neon Carrot: a verified name, unresolved older numbers

Crayola's Neon Oil Pastels product description explicitly includes neon carrot. That evidence verifies the name in a maker's product context. It does not authenticate either #FF9933 or #FFA343 from the supplied older list, and neither value is introduced as a verified current Crayola specification here. The name-only supplement retains the distinction. [32, 33]

Non-photo blue describes a practical drawing purpose

STAEDTLER describes its 108 30BKM non-photo blue pencil as light blue and suitable for preliminary drawings, with copying and digital-removal uses. The consulted page supplies no RGB/hex specification. The name alone does not guarantee that every scanner or copier setting will suppress the mark. Test the actual tool and reproduction workflow; the older #A4DDED claim remains an unverified numerical convention. [26, 33]

Institutional palettes and source versions

North Texas Green is an explicit lookup alias

The public UNT 2025 Brand Reference Guide names UNT Green and specifies #00853E. This edition includes North Texas Green as a transparent editorial lookup alias and retains UNT Green as the source name. The older list's #059033 is not verified by that guide. A university's ordinary green associations do not replace its actual numerical specification. [31, 33]

Do not invent a brand correction

The older list includes Nintendo Red #E4000F. No consulted official numerical guide establishes that exact name/value/version in this edition. The value stays in the reconciliation register as unverified. A familiar alternative red found without the applicable primary guide would not resolve the provenance problem. [33]

A changed digital preview is not proof of changed paint

The current consulted Crayola Navy Blue preview is #0066CC. The older list also supplies #1974D2 under Navy Blue. Their difference does not establish a physical reformulation. Similarly, 30 code-matched Sherwin-Williams previews differ between the older and retained tables. Four older-only identities—Nouvelle White, Narcissus, Nasturtium, and Nervy Hue—remain explicitly historical because current numerical specifications were not established. [3, 16, 34]

Readable color: a worked contrast example

Calculate from linearized sRGB

Divide each eight-bit channel by 255. For a normalized channel c at most 0.04045, use $c/12.92$; otherwise use $((c + 0.055)/1.055)^{2.4}$. Relative luminance is $0.2126R + 0.7152G + 0.0722B$ for those linearized components. The contrast ratio is $(\text{lighter luminance} + 0.05)/(\text{darker luminance} + 0.05)$. [20]

Navajo white gives a useful comparison

CSS `navajowhite` has calculated relative luminance about 0.765197. Opaque black text gives about 16.30:1 contrast; opaque white gives about 1.29:1. Black passes the normal-text AA contrast threshold, while white is below even the large-text threshold. The figure deliberately shows the poor white-text case as an example. [17, 20, 21]

Use the unrounded threshold and the actual context

WCAG AA generally requires at least 4.5:1 for normal text and 3:1 for large text, with specified exceptions. Large text means at least 18 points, or 14 points when bold. Compare the unrounded result; rounding up does not turn a failing pair into a pass. Transparency, images, different states, and other page components require their own assessment. [21]

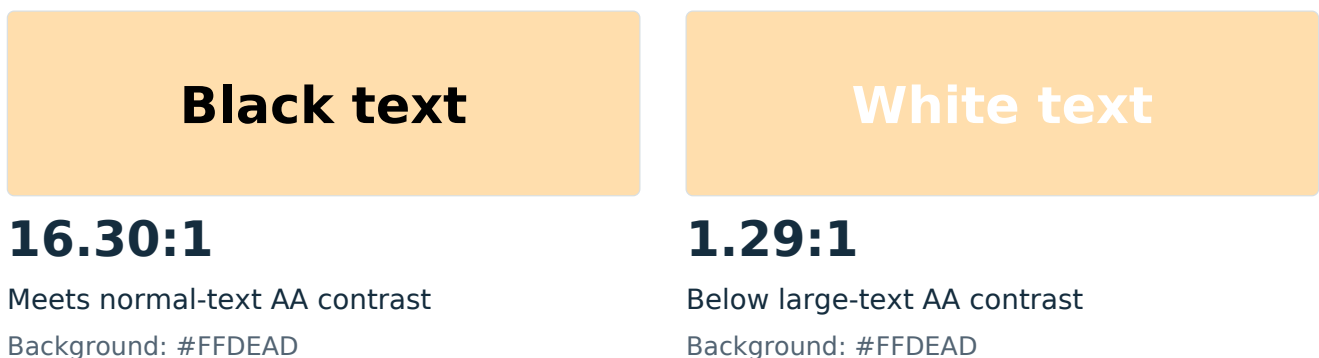

Names and labels carry information alongside color

Every atlas patch carries an ID, name, source, and hex value. The HTML offers labeled search and family controls, semantic tables, and a live result count. The PDFs have selectable text, links, and bookmarks; full PDF/UA conformance is not asserted. A pairwise contrast calculation does not certify an entire interface.

Evidence quality and unresolved records

Internal numerical conflicts remain visible

Of 78 N rows in the consulted Pantone FHI dealer tables, 32 TPG rows have RGB channels that do not encode to their published hex. They are excluded from the digital directory and atlas. The unresolved appendix preserves both fields and gives the hex calculated from RGB only as an arithmetic diagnostic. Neither column is declared the intended Pantone specification. The 46 consistent dealer rows remain clearly qualified approximations. [12]

An editorial page is not a missing color product

Four discovered pages were outside individual-product numerical scope: Dulux Nourish and Norsu Interiors, Nerolac's neutral-shades category, and Farrow & Ball's neutral-paint category. They are logged as scope gaps, not counted as unresolved swatches. PPG coverage is the bounded 13-page numerical selection; Jotun coverage is the N subset of the specified 989-record regional inventory. [6, 7, 9, 11, 15]

All 31 older entries are accounted for

Fourteen supplied rows have exact source-specific matches in the consulted evidence. Seven share a name with different consulted values, and ten have no admitted numerical match. Matching an unstated original source remains a separate question. Unverified does not automatically mean false, and a same-name value from another issuer is not an interchangeable replacement. The reconciliation preserves the original names, hex values, and families. [33]

Source coverage and family guide

Source groups identify distinct evidence contexts. They are not a count of unrelated manufacturers. TCX/TPG dealer previews, the two Sherwin-Williams table contexts, and the institutional lookup alias are deliberately distinguishable. Counts below are after documented alias consolidation.

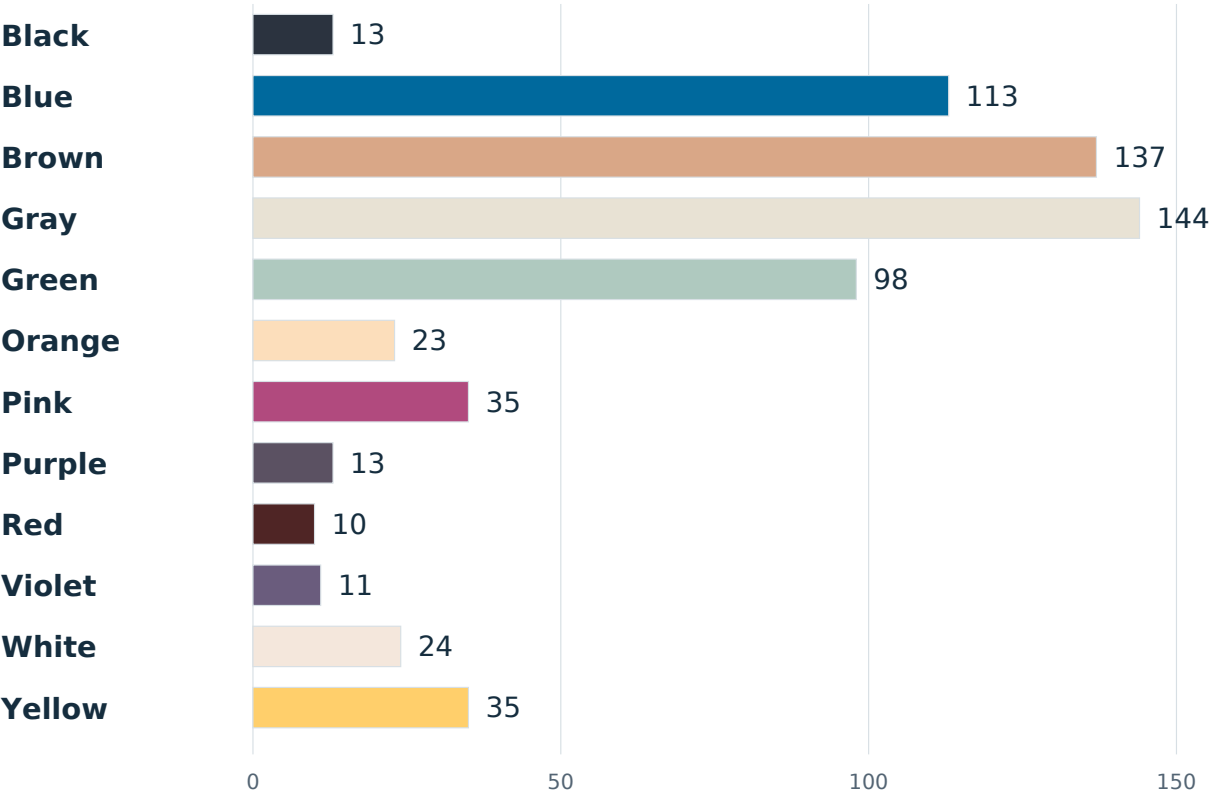

Source group	n	Consulted evidence
Dulux Australia	119	119 numerical product URLs; editorial pages excluded. [9]
Behr	111	Complete N subset of consulted numerical index. [1]
Benjamin Moore	82	Complete N subset of consulted family inventory. [2]

Dunn-Edwards	38	Complete N subset of 2025 CAD books; exact RGB8. [4]
Resene	36	All 36 linked named numerical previews from the N index. [5]
Nerolac	26	26 numerical product pages; category page excluded. [11]
Jotun	18	18 N names from 989 recovered regional identities. [15]
PPG	13	13 numerical product pages; bounded family-index selection. [6]
xkcd survey	12	12 informal labels, not physical standards. [13]
Pantone TPG / dealer	7	Seven consistent dealer rows; 32 conflicts held. [12]
X.Org X11	7	Nine source rows represented by seven records. [18]
Little Greene	4	Four named product hex fields from consulted indexes. [10]
Sherwin-Williams historical table	4	Four older-table contexts; current numbers unverified. [34]
Farrow & Ball	3	Three primary current/archive product previews. [7]
CSS Color	2	Both N keyword spellings in the consulted draft. [17]
Crayola	1	One named Explore Colors digital preview. [16]
University of North Texas	1	Explicit lookup alias for the verified UNT Green guide value. [31]

Aliases and source versions

The two combined alias rows are X11 case/spacing variants, NavajoWhite and NavyBlue. Their retained lowercase spaced labels remain searchable. Distinct lexical labels and numbered X11 variants remain separate identities even where RGB values coincide. No N Nerolac spelling-pair merge or Dulux duplicate-page merge was required. [\[9, 11, 18\]](#)

Alternative name	Retained record	Source / identifier
NavajoWhite	navajo white / N0166	X.Org X11 / rgb 1.1.1
NavyBlue	navy blue / N0193	X.Org X11 / rgb 1.1.1

The source-version JSON preserves 30 code-matched differences between the older Sherwin-Williams table and retained previews. Four older-only identities remain explicitly qualified. These differences in digital evidence do not establish a physical reformulation. [\[3, 34\]](#)

Historical N-color names

The 118 entries below are transcribed from the scanned principal N block on printed pages 127–128 (PDF pages 163–164) of NBS SP 440. N-initial modified forms are included; inverted index pointers and modified names beginning with another letter are excluded. This is a bounded transcription, not an exhaustive search for N words filed elsewhere in the dictionary. [22]

Key	Earlier source interpreted by NBS
A	American Association of Textile Chemists and Colorists and Society of Dyers and Colourists.
B	H. A. Dade, Color Terminology in Biology.
F	Federal Specification TT-C-595, Colors; (for) Ready-Mixed Paints.

Each source assignment is expanded separately; a category region is not a unique RGB triplet. Source spellings and surviving sample locators remain explicit. Numbered Navy entries and specification-qualified Navy Gray remain distinct. Obsolete and potentially offensive historical labels are retained solely for documentary accuracy, with a note; they are not recommended modern names.

Unresolved numerical evidence

32 source rows are held. The table preserves the published hex and RGB; the final column is the exact hex calculated from that RGB, not an editorial correction. All held rows contain conflicting numerical fields. None receives an admitted digital swatch in this edition.

Name-only evidence and scope gaps

Name / source	Evidence boundary
Naphthol reds / CAMEO / Vibrantz	A pigment class, including several distinct red pigments. No universal sRGB value is inferred from its chemistry or class name.
Neon Carrot / Crayola	The maker’s product description establishes this name. It supplies no numerical value, so the two older hex claims remain unverified.
Non Photo Blue / STAEDTLER	Light-blue preliminary-drawing pencil documented by the maker. No RGB/hex specification recovered; copying/scanning behavior is not defined by a universal hex value.

Naphthol reds are a material class, Neon Carrot has maker name evidence without an admitted numerical value, and Non Photo Blue has a documented drawing use without a specified hex. Four category/editorial pages are separately logged outside individual-product scope. PPG coverage is bounded; Jotun coverage is the N subset of the consulted 989-record regional inventory. Reconciliation of the earlier N list

All 31 rows from the supplied n-colors.txt are accounted for below. An exact match establishes a documented source context, not the original author's unstated intent. Same-name values from different issuers are not interchangeable. Original legacy families remain comparison input. [33]

Legacy entry / value	Evidence outcome	Resolution / matched IDs
NL001 / Nadeshiko Pink / #F6ADC6 / pink	Legacy numerical claim unverified	A traceable source-specific numerical specification is still required. No replacement is inferred from the name.
NL002 / Napier Green / #2A8000 / green	Legacy numerical claim unverified	A traceable source-specific numerical specification is still required. No replacement is inferred from the name.

NL028 / Nintendo Red / #E4000F / red	Legacy numerical claim unverified	No consulted official numerical brand guide establishes this exact name/value/version. Keep the claim unverified; do not replace it with an unsourced familiar red.
NL029 / Non Photo Blue / #A4DDED / blue	Legacy numerical claim unverified	STAEDTLER verifies a non-photo blue pencil and its intended drawing use, but the consulted product page specifies no RGB/hex. The legacy #A4DDED remains unverified.
NL030 / North Texas Green / #059033 / green	Same name, different consulted values	The public UNT 2025 Brand Reference Guide specifies UNT Green as #00853E. North Texas Green is an explicit editorial lookup alias. The legacy #059033 is not verified by that guide.
NL031 / Nyanza / #E9FFDB / green	Legacy numerical claim unverified	A traceable source-specific numerical specification is still required. No replacement is inferred from the name.

Glossary

Term	Meaning
Color name	A label that may be descriptive, historical, source-specific, or formally defined.
Source-specific identity	A name within an issuer, system, code, market, collection, or version context.
Hexadecimal	Base-16 notation; #RRGGBB encodes three eight-bit channels.
sRGB	The encoding used for this edition’s screen illustrations and contrast calculations.
LRV	A source-reported reflectance quantity, kept separate from calculated preview luminance.
Shade family	GKBook’s editorial visual grouping, separate from a maker’s category.
Alias	A documented alternative spelling or an explicitly identified lookup label.
Dealer approximation	A third-party numerical preview; not an authenticated licensed physical standard.
Historical category	An ISCC–NBS descriptive region, not one unique RGB triplet.
Pigment identity	A material designation that requires composition and context, not just a digital patch.
Relative luminance	A weighted quantity calculated from linearized sRGB components.
Contrast ratio	The WCAG luminance ratio for a specified foreground/background pair.
Held record	A source row excluded from the numerical atlas because its fields conflict.
Name-only evidence	Evidence for a name or material without an admitted universal numerical value.
Legacy reconciliation	An accounting of every supplied older row against the consulted evidence.

Frequently asked questions

What are some colors that start with N?

Navy, Navajo white, Naples yellow, neon green, nickel, and nutmeg are examples. Choose a specific source identity before assigning an exact digital value.

Is navy always #000080?

That value exactly defines CSS navy and the consulted X11 navy entry. Other sources can use Navy or Navy Blue for other previews; Crayola's current Navy Blue is #0066CC. [16–18]

Is Navajo White always white?

The name does not determine a universal visual category. CSS navajowhite is a warm cream grouped here in Yellow. Maker-specific products retain their own values and reviewed families. [17]

Does neon green contain neon gas?

The color name alone does not make a chemical or emission claim. Neon's own electrical-discharge light is reddish orange; an informal neon-green RGB label is a separate convention. [13, 25]

How many N colors are there?

This edition has 656 admitted digital records within its stated sources and 118 separately documented historical lexical entries. Neither count is a worldwide total, and the historical entries are not additional verified RGB colors.

Can the hex values specify physical paint?

Use the current issuer's code, market, product, finish, and physical reference for that purpose. A web preview illustrates a record; it does not replace a physical standard.

Why do some names have no swatch?

A material identity, historical region, or product name does not necessarily supply a unique modern RGB value. The edition preserves that evidence boundary instead of inventing one.

Is the page already online?

The HTML is a complete offline publication file. No live website has been modified or published.

[32] Crayola. Neon Oil Pastels, 12 count, item 52-4613. Primary product description includes neon carrot. It establishes the name in this product context, not a numerical RGB/hex convention.

[33] User-supplied GKBook N list, n-colors.txt, 31 entries, recovered for this continuation. Comparison input, not independent verification. Every supplied row is accounted for in the new reconciliation.

See the supplied-list reconciliation appendix

[34] Sherwin-Williams. Older manufacturer RGB table. Four N identities absent from the general table remain explicitly historical. Thirty overlapping N codes have differing older/retained preview values. Current numerical specifications for the four older-only records were not established.
