GKBook

Colors That Start With S

An illustrated, source-qualified encyclopedia of names, digital previews and historical color evidence.

4,441 digital records	417 historical headwords	12 shade families
Source and code preserved	Selected direct assignments	Visual editorial review

Includes a complete alphabetical digital directory, a source-linked historical appendix, held-record register and companion swatch atlas.

Checked October 19, 2026. International, source-bounded coverage. Prepared in US English.

References and evidence notes 458

S is a vocabulary, not one palette

This edition admits 4,441 digital records from 26 source/system/version groups, representing 4,391 distinct RGB triplets. It separately retains 225 unresolved digital-source records, 417 historical headwords with 504 direct assignments, and all 196 original-list rows.

Start with the kind of evidence

Salmon, sapphire, sepia, silver and spring green all begin with S, but they do not mean the same kind of thing. A CSS keyword defines a particular digital value. A paint name identifies a product within a maker's catalog. A historical pigment name describes a material or a tradition. A university color belongs to a particular owner and edition of its guidance. This encyclopedia preserves those differences instead of treating a familiar name as a universal specification.

What one directory record means

Each digital entry combines a name, a source, a code or system context, a numerical preview and a citation. A shared name in two catalogs remains two records. Different strength labels, numbered variants and materially different source versions remain distinct where the source distinguishes them. The initial letter is taken from the documented display name, not from an invented prefix added to increase the inventory.

How to use this edition

Begin with the illustrated article for concepts and examples. Use the searchable HTML to find a name, product code, source, family or hex value. Use the alphabetical PDF directory for a stable reference, and the companion atlas to compare patches within the twelve editorial families. The CSV and JSON preserve the complete digital inventory; the editorial notes retain every original S-list row and explain its proposed handling.

What the totals do and do not measure

The totals count source-specific records in the consulted inventories. They do not count every S name ever used, every currently purchasable paint or every physical standard. Catalogs differ in size, geography and archival coverage. A large number of gray or beige paint previews therefore does not establish that those colors are more popular or more common in nature.

Salmon shows why the source matters

A useful comparison

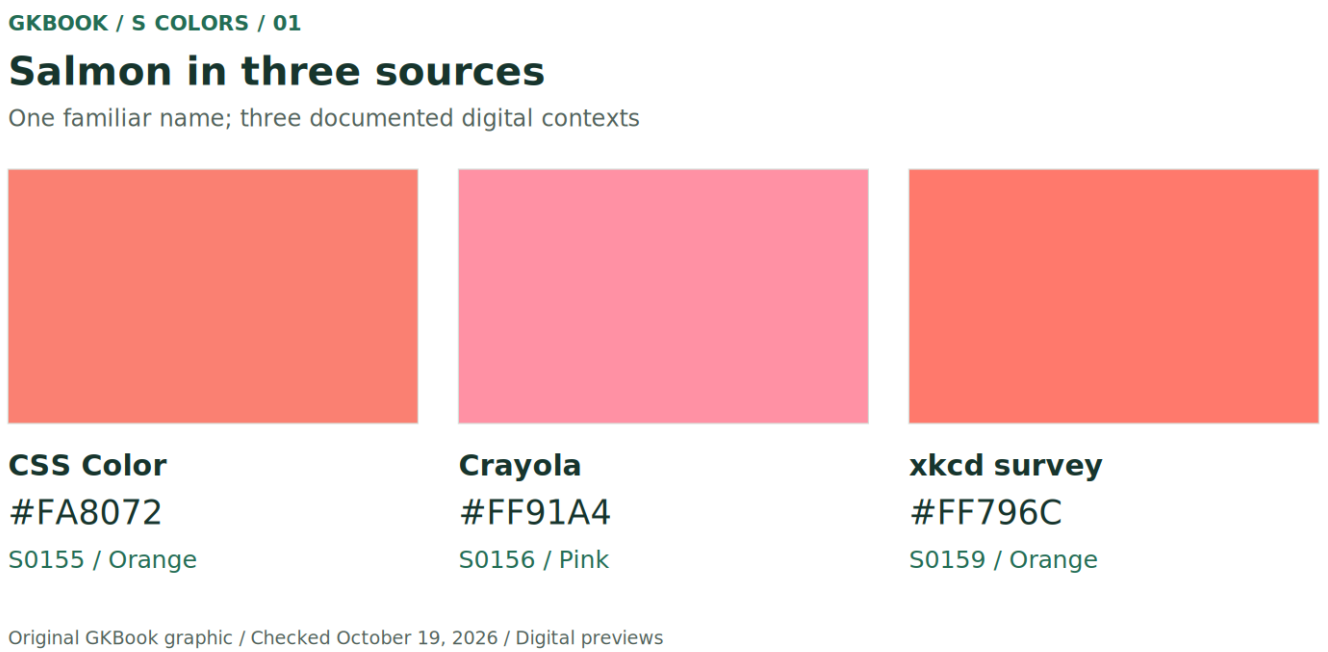

The CSS keyword salmon is #FA8072, RGB (250, 128, 114). The xkcd survey label salmon is #FF796C, RGB (255, 121, 108). Both are documented numerical records, yet their roles differ: the first is a language-defined named color; the second summarizes an informal naming survey. Neither value is a measurement of every salmon fish, food sample or paint sold under that word. [19, 15]

Keep the exact name and qualify the preview

Other S words recur across manufacturers: Sand, Sage, Sea Mist, Silver, Slate, Snow and many more. The appropriate label for a product preview is the maker's name plus its code and the displayed source value. When a record comes from an older chart, an archive or a supplier's website, retain that context. A convenient short label must not erase the evidence boundary.

A spelling variant is not automatically a new color

CSS slategray and slategrey are two accepted spellings for the same value. X.Org additionally contains numbered names and spacing/case variants. The directory retains distinct CSS keywords but consolidates redundant X.Org case/spacing forms as aliases. It does not turn a source's duplicate endpoint into an additional color. [19, 20]

CSS and Crayola previews and the informal xkcd survey label retain their own identities.

The complete CSS S keyword set

Fourteen spellings, thirteen values

The S-starting CSS spellings are saddlebrown, salmon, sandybrown, seagreen, seashell, sienna, silver, skyblue, slateblue, slategray, slategrey, snow, springgreen and steelblue. There are fourteen spellings and thirteen distinct sRGB triplets because slategray and slategrey both equal #708090. The consulted CSS Color 4 document is the October 9, 2026 Candidate Recommendation Draft; its status is preserved in the citation. [19]

Spring green is an especially important correction

CSS springgreen is #00FF7F. The original list's Spring Green 1 and Spring Green 2 are separate legacy labels, with #A9F971 and #ECEBBD respectively. The first matches the xkcd spring green survey value; the pale second value is not the CSS keyword. In this edition, the pale yellow-beige patch is grouped in Yellow, while the CSS patch is Green. A matching English phrase alone is not enough to assign a standard.

CSS and X11 overlap without becoming interchangeable

The X.Org rgb 1.1.1 file provides its own named RGB entries, including numbered variants. Several unnumbered S names overlap with CSS. A programmer should use the actual CSS keyword table when writing CSS; the presence of a name in X.Org does not add a new keyword to the CSS language. [19, 20]

Keyword	Hex	RGB	Family
saddlebrown	#8B4513	139, 69, 19	Brown
salmon	#FA8072	250, 128, 114	Orange
sandybrown	#F4A460	244, 164, 96	Orange
seagreen	#2E8B57	46, 139, 87	Green
seashell	#FFF5EE	255, 245, 238	White
sienna	#A0522D	160, 82, 45	Brown
silver	#C0C0C0	192, 192, 192	Gray
skyblue	#87CEEB	135, 206, 235	Blue
slateblue	#6A5ACD	106, 90, 205	Violet
slategray	#708090	112, 128, 144	Gray
slategrey	#708090	112, 128, 144	Gray
snow	#FFFAFA	255, 250, 250	White
springgreen	#00FF7F	0, 255, 127	Green
steelblue	#4682B4	70, 130, 180	Blue

Reading a hexadecimal color

Six digits encode three channels

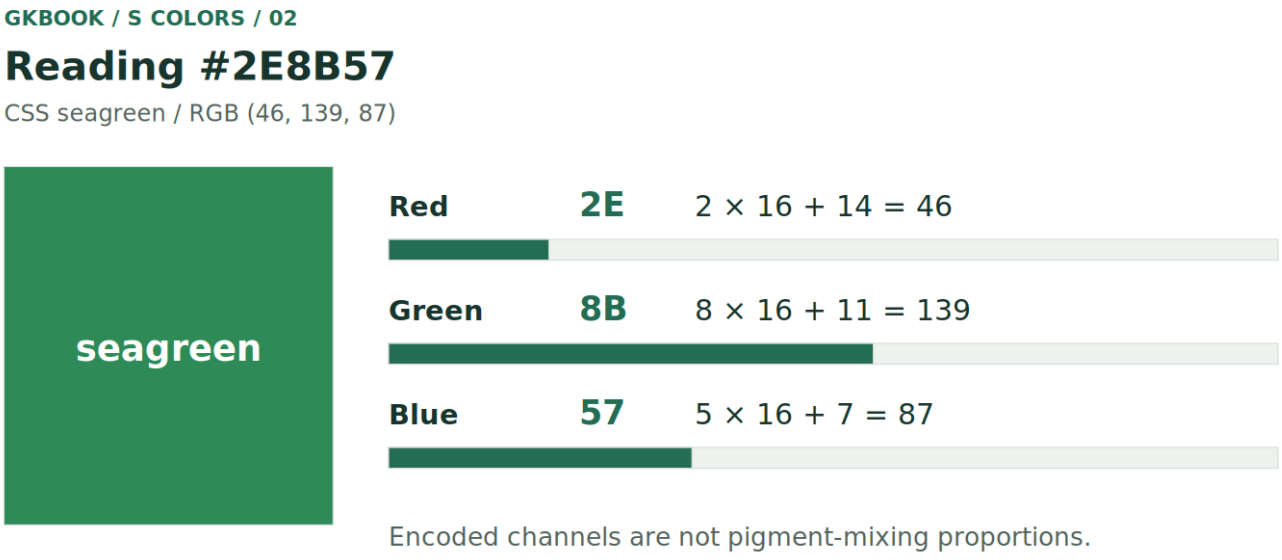

For an opaque eight-bit color, #RRGGBB contains two hexadecimal digits each for red, green and blue. CSS seagreen, #2E8B57, becomes RGB (46, 139, 87): 2E = 2 × 16 + 14 = 46; 8B = 8 × 16 + 11 = 139; 57 = 5 × 16 + 7 = 87. The hexadecimal and decimal forms are exact alternative notations. Agreement between them checks transcription; it is not a second independent source. [19, 35]

Channels are not paint proportions

A higher encoded green channel does not mean that a paint contains that percentage of green pigment. These values describe a digital preview. The edition interprets published eight-bit previews as sRGB for display and contrast calculations; that convention does not supply missing physical measurement conditions or prove that every source image has an embedded profile. [35]

Screen appearance and material appearance

A screen emits light, while a painted surface reflects illumination. Surface texture, gloss, substrate, coating thickness, illumination and viewing conditions can affect the material appearance. A website preview helps identify and compare a catalog entry, but the maker's current sample and specification remain the appropriate reference when choosing a physical product. RGB alone cannot encode metallic sparkle, pearlescence, fluorescence or transparency.

Notation conversion checks transcription; it is not independent source verification.

How the twelve families were reviewed

A consistent navigation system

The editorial families are Black, Blue, Brown, Gray, Green, Orange, Pink, Purple, Red, Violet, White and Yellow. They describe the appearance of the displayed patch. They do not replace source categories or alter names, codes or values. Identical hex values receive the same family, even when the names and sources differ.

Review the patch, then preserve the name

Every distinct admitted patch, together with otherwise unmatched legacy patches, was inspected in neutral-surround family boards. Provisional hue and lightness grouping helped organize the review; visual review then revised boundary cases and warm or cool neutrals. The final revised placements were inspected again. The downloadable review log records the original grouping, final grouping and changes. This is an editorial display judgment, not an instrument-based physical color measurement.

Brown, gray and white need explicit conventions

Brown includes earth colors, tan, beige, taupe and warm khaki where the warm neutral character dominates. Gray includes low-chroma neutral and tinted-gray patches. White includes very light off-whites and very pale tints; it is not restricted to #FFFFFF. These conventions explain why a warm Shadow or Stone may belong in Brown even if a source name, old page or raw hue calculation suggests Yellow or Orange.

Purple and Violet remain separate

Violet generally collects blue-leaning purples and selected lavenders. Purple collects more balanced or red-leaning purples, mauves and plums. Pale rose colors may enter Pink; very muted examples may enter Gray. The names are kept intact. For example, CSS slateblue remains named slateblue while its editorial family here is Violet.

Family correction does not verify a number

The original Seafoam Blue #78D1B6 is visually Green, Soap #CEC8EF is Violet, Shadow #8A795D is Brown and Sunburnt Cyclops #FF404C is Red. Those judgments can be made about the supplied patches whether or not their name/value provenance is authenticated. The legacy appendix therefore gives separate numerical and family outcomes. Never use a successful family review as proof that a value is official.

Original GKBook graphic / Checked October 19, 2026 / Digital previews

Families are reviewed editorial labels. Original names and numeric specifications are preserved.

Sienna, sepia, smalt and sap green

Sienna and sinopia are material names

CAMEO, the Museum of Fine Arts Boston's materials reference, describes sienna as an earth pigment and distinguishes the changed appearance produced by heating it. Sinopia belongs to the history of reddish earth pigments and drawing or painting practice. Neither entry establishes a universal six-digit web color. CSS sienna is an exact digital keyword; its identity should remain explicitly CSS. [29, 31, 19]

Sepia has more than one historical use

Sepia originally refers to a brown-black colorant associated with cuttlefish ink; the name is also used for later mixtures and color effects. A historical sepia sample, a modern artist's product and a digital survey label need not match. The directory authenticates only the particular numerical records supported by its cited sources. [27]

Smalt is a glass pigment

Smalt is a cobalt-colored glass pigment rather than a universal screen blue. Particle characteristics, binding medium and alteration can affect its appearance in an artwork. A catalog may reuse the word for a modern paint preview without describing the historical pigment's composition. Material history and modern product naming should be explained separately. [28]

Sap green and Scheele's green

Historical sap green is associated with plant-derived colorants, including buckthorn preparations; later products may use other formulations. Scheele's green is a different historical pigment associated with copper arsenite. The shared word green does not imply shared chemistry or a single RGB triplet. This article uses the historical names as material context and does not supply invented digital standards for them. [30, 32]

Sapphire, silver and other appearance words

Sapphire is not only a blue swatch

GIA describes sapphire across a range of colors; red corundum is called ruby. A named Sapphire Blue paint or a RAL card is a particular catalog identity, not a specification for every gemstone called sapphire. Gem color also depends on the individual stone and viewing conditions. [33]

Silver names a digital gray and a material appearance

CSS silver is #C0C0C0, a flat digital gray. It does not reproduce a polished metal's directional reflections. Product names such as Silver Cloud, Silver Green and Silver Pink can describe quite different tinted previews. Their source names are retained while the family reflects the actual numerical patch. [19]

Snow, sand and sea are descriptive sources of names

Natural materials and scenes vary. A manufacturer can use Snow for an off-white and Sand for a beige, while another catalog uses a different preview. This is ordinary catalog variation, not necessarily an error. The error occurs when an article removes the maker and code and presents one value as the only correct color of snow, sand or the sea.

Brand and institutional colors: current owner evidence

Samsung Blue

Samsung's own logo guidance publishes Samsung Blue as #1428A0, RGB (20, 40, 160). The original list supplied #12279E. This edition recommends the owner value for a current Samsung Blue entry and preserves the earlier number only in the reconciliation. It does not label the earlier number a historically official specification without evidence. [22]

Sacramento State

The current official primary-palette image names Sac State Green as #004E38, RGB (0, 78, 56), and Sac State Gold as #C6BC89, RGB (198, 188, 137). The original Sacramento State Green #043927 should not be silently treated as the current specification. Both green patches belong in Green rather than Black under this edition's visual taxonomy. [23]

An owner source can contain a contradiction

Sacramento State's secondary-palette image prints Stinger Green as #008064 and RGB (0, 132, 83). Those are different values: the printed RGB converts to #008453. Because the owner source conflicts with itself, neither is admitted as the resolved Stinger Green value. The held record preserves both claims and identifies the image so the discrepancy can be referred to the owner. Spruce Green on the same image has consistent #56B146 / RGB (86, 177, 70). [24]

Syracuse University

The university School of Education's public branding quick guide identifies Syracuse University Orange as #F76900 and Syracuse University Blue as #000E54. The orange also agrees with the university design-system search evidence consulted during research. For the original Syracuse Orange #D44500, the proposed current replacement is the explicitly cited university orange. Historical or special-use variants should retain their own dated evidence. [25]

Standards, safety colors and licensed systems

Keep RAL codes with RAL names

RAL English display names beginning with S are included with their official codes and the website's CSS previews. Those previews are qualified approximations, not replacements for the physical standards. For example, the word Signal in a name is not enough to establish that a legacy value is the RAL entry with a similar label. Preserve both the system and code. RAL's stated conditions for numerical-value use are separate from whether a value can be observed on a webpage. [16, 37]

Safety and transport colors need their own context

Names such as Safety Orange, Safety Yellow, School Bus Yellow and Selective Yellow can refer to technical color requirements, products or informal lists. A web hex alone does not demonstrate compliance with such a requirement. The Pennsylvania school-bus color appendix is a useful example of a specification expressed through physical colorimetry and tolerances rather than a single universal browser value. This encyclopedia records that distinction; it does not certify a product or installation. [34]

Pantone names and dealer previews

The Pantone TCX and TPG entries in this edition come from Columbia Omni Studio's dealer tables. Internally consistent rows are included only as dealer approximations. Rows whose printed hex and RGB disagree are held rather than repaired by choosing the more convenient number. A checked dealer table is not independent authentication of a current licensed Pantone value. [14]

Serenity has a documented identity

Pantone identifies 15-3919 Serenity together with 13-1520 Rose Quartz as its 2016 Color of the Year selection. That primary evidence supports the name, code and year. It does not automatically authenticate every hex circulated on public color lists. The directory labels any admitted dealer approximation separately. [38]

Crayola and informal color lists

Use the product source for the numerical preview

The admitted Crayola records use named RGB preview fields from Crayola's current Explore Colors page. An official printable crayon chart can corroborate a product name without giving an RGB specification. Neither source proves every public conversion for every historical or specialty-line name. Original-list entries therefore receive exact matches only where a source supports the actual name/value pair. [18, 39]

Specialty names need their own product evidence

A familiar Crayola-associated name may describe a regular crayon, a specialty line or a scent/color pairing. Do not attach a history, renaming date or exact hex simply because it appears on a general list. The older S-list audit flagged this problem; the reconciliation preserves unresolved entries rather than presenting their values as owner-certified.

The xkcd dataset has a different purpose

The xkcd color-naming survey is primary evidence for informal English labels used in that dataset. Original spellings, including informal or coarse labels, are retained because they identify the survey records. They are not editorial endorsements and are not industrial standards. An exact legacy match to xkcd is a survey-source match, not manufacturer verification. [15]

Spanish names are not one authenticated modern palette

Historical references contain several Spanish-prefixed names, and modern catalogs may reuse them. That does not establish a single official Spanish color family or validate the original list's exact numbers. The historical appendix gives its source-specific category assignments; unsupported modern hex claims remain unverified unless a separately named source supports them. [26]

Reading the historical appendix

What NBS SP 440 contributes

Kenneth L. Kelly and Deane B. Judd's 1976 NBS Special Publication 440, Color: Universal Language and Dictionary of Names, associates names from identified references with numbered ISCC-NBS categories. Its S section occupies printed pages 143-148 in the consulted scan. These are historical naming and category records, not sRGB definitions. [26]

A conservative transcription

The appendix includes direct assignments supported by agreement between a fresh OCR pass and the PDF text layer, with reviewed headword corrections and table-boundary exclusions. Ambiguous readings are retained in a separate transcription-hold file. Inverted cross-references without their own direct assignment are not counted as new color definitions. The resulting selection is not claimed to be an exhaustive transcription of every S line.

Read source keys, not just names

The source keys identify different underlying references, including Maerz and Paul, Ridgway, Plochere, the Horticultural Colour Charts and the Textile Color Card Association. A name can therefore carry several assignments. Numbers such as 120 or 186 identify categories in that system; they are not RGB channels, pigment recipes or product codes. The companion category key expands each number into its historical description.

Do not manufacture a historical hex

Converting a broad category description into a chosen screen patch would introduce a new editorial approximation. This edition avoids that step. The historical directory contains names, source keys, category numbers, descriptions and scan locations, while the swatch atlas contains only the separately admitted digital records.

Readable text on a color patch

Contrast is a relationship

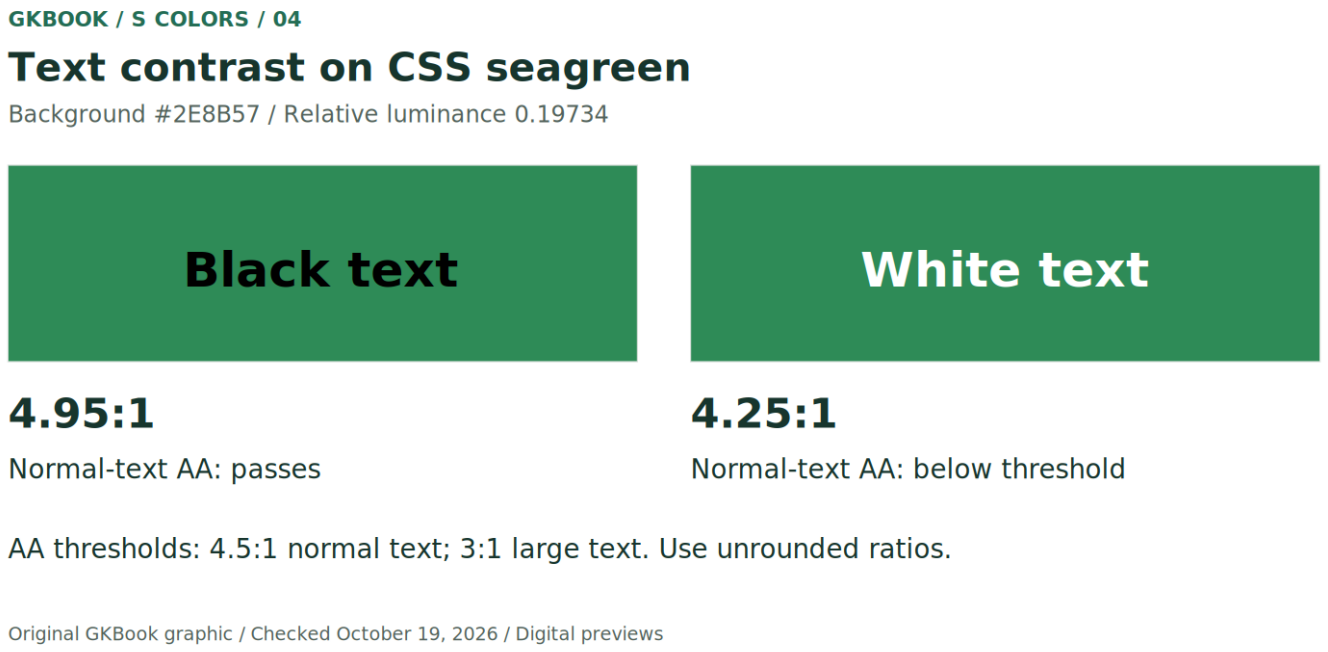

The text color and background color together determine contrast. This edition calculates relative luminance from the encoded sRGB channels and evaluates black and white as opaque foregrounds. The suggested text field chooses whichever has the larger ratio; it does not evaluate an entire interface, transparency, images behind text, hover states or color-vision differences. [36]

A worked seagreen example

For CSS seagreen #2E8B57, first normalize each channel to 0-1, then linearize it: divide by 12.92 at or below 0.04045; otherwise raise ((channel + 0.055) / 1.055) to 2.4. Relative luminance is 0.2126R + 0.7152G + 0.0722B using those linearized channels. Contrast is (lighter luminance + 0.05) / (darker luminance + 0.05). The figure shows the computed black and white ratios. [36]

Use the threshold that fits the text

WCAG Level AA requires at least 4.5:1 for normal text and 3:1 for large text under the criterion's definitions. Evaluate the unrounded ratio at a boundary. A passing sample patch does not establish overall WCAG conformance. The searchable page includes written names, numbers and source labels so that color alone does not carry the directory's meaning. [36]

The pair determines contrast. This calculation does not certify an entire interface.

Applying the S-list resolutions

Three different kinds of change

A current owner correction changes the proposed numerical entry and retains the old claim in the audit trail. An exact source-specific match retains a value with its source and qualifiers. An unsupported value remains outside the admitted atlas, even if its name is historically attested or its visual family can be corrected. These outcomes make the publication reviewable without hiding uncertainty.

Do not substitute a same-name product automatically

A legacy Sage may have many same-name catalog candidates. A matching word with a different hex does not prove that the old entry intended any particular one. The reconciliation supplies candidate record IDs where available and asks the editor to choose the intended source before replacing it. Arbitrary suffixes such as 1 and 2 from the original list are preserved in the legacy fields; they are not promoted into official names.

Keep verification current

Every numerical record includes a citation and the check date. Retrieval metadata preserves URLs, response status and hashes for the consulted source snapshots. The bundle does not redistribute entire manufacturer webpages, catalog PDFs or historical scans. Future updates should compare the same source identity and code, retain version context and repeat the numerical and visual checks where a value changes.

Source coverage

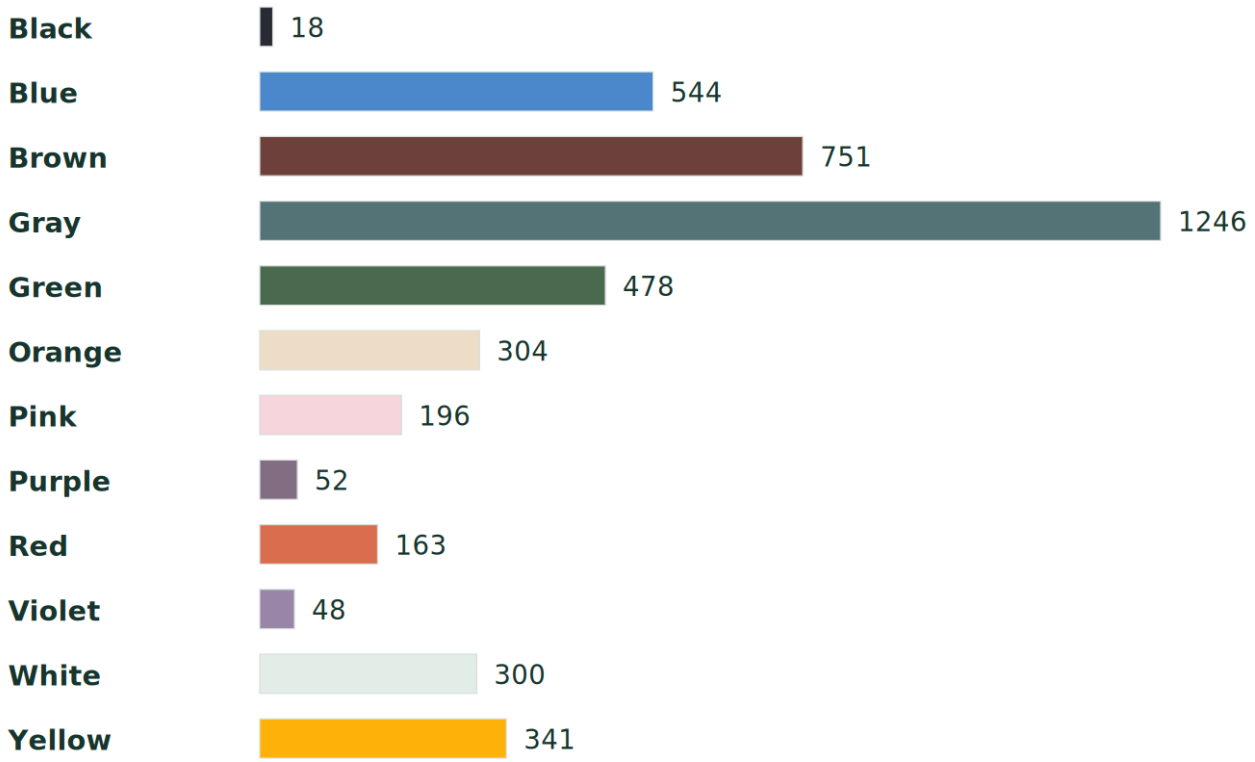

The table counts admitted records after duplicate consolidation. Publicly accessible sources were retrieved during this research cycle. Discovery omissions, non-product URLs, source failures and older/current numerical differences are preserved in the companion data.

GKBOOK / S COLORS / 05

The twelve editorial families

4,441 admitted source-specific digital records

Original GKBook graphic / Checked October 19, 2026 / Digital previews

Counts reflect the consulted catalogs and editorial grouping, not worldwide vocabulary or popularity.

Evidence categories

Category	Meaning
Primary issuer	A named numeric field from the maker or owner; screen preview scope remains explicit.
Standard / dataset	CSS or X.Org source-specific digital definitions; the named version is retained.
Historical issuer table	A separately qualified older issuer numerical table.
Survey label	Original informal naming-survey data, not an industrial standard.
Supplier preview	A supplier publishes the preview; current owner specifications are not authenticated.
Dealer approximation	A dealer table supplies the value; current licensed Pantone numerical authentication is absent.

Frequently asked questions

How many S colors are there?

There is no universal total. This edition reports the records admitted from its stated sources and separates aliases, historical assignments and unresolved claims.

How many CSS color names begin with S?

Fourteen accepted spellings, representing thirteen distinct values. slategray and slategrey are aliases for #708090.

Is every hex in the directory official?

No. Evidence labels distinguish primary issuer previews, CSS and X.Org entries, informal survey labels, older tables, supplier previews and dealer approximations.

Why are there many records with the same name?

Source, code, collection, region or version can differ. Those distinctions remain visible instead of being flattened into one supposedly universal value.

Can I replace a paint sample with the atlas?

Use the atlas to explore documented digital previews. Use the maker's physical sample and current product specification for material selection.

Why is slateblue in Violet?

The source name stays slateblue. Violet is this edition's independently reviewed navigation family for its blue-leaning purple patch.

Is Stinger Green resolved?

No. The cited official image has conflicting hex and RGB fields. The held register preserves the discrepancy without choosing a value.

Does an NBS historical entry prove a legacy hex?

No. The historical source supplies category assignments and naming evidence, not a universal sRGB triplet.

Are all original S-list values included in the atlas?

No. The reconciliation preserves every original row, but only supported digital records enter the admitted atlas.

Can the page work offline?

The downloadable HTML contains the complete article, teaching graphics and searchable directory. Citations open external sources when a connection is available.

Glossary

Term	Meaning
Alias	A different accepted spelling or label for the same source-defined record or value.
Chroma	The strength of chromatic color relative to a neutral appearance in a specified color model.
Digital preview	A screen representation associated with a named source record; not necessarily a physical standard.
Hexadecimal	Base-16 notation; two digits can encode an eight-bit channel from 0 to 255.
LRV	A source-reported light reflectance value. It is not automatically interchangeable with computed screen relative luminance.
Primary source	The issuer, owner or original dataset providing the specific fact under discussion.
sRGB	A defined RGB color space used here to interpret the displayed eight-bit previews.
Shade family	An editorial navigation group based on the displayed patch, kept separate from the source name.
Source-specific record	A name and numerical value qualified by its issuer, system, code and relevant context.
Unverified claim	A preserved statement for which this review did not establish adequate supporting evidence.

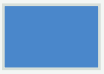

Alphabetical digital directory

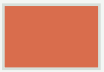

Each row is one admitted source-specific record. A displayed swatch is an illustration of its cited numerical preview. Keep the evidence note with any reused value. Click a source link for the actual record; complete URLs and extraction evidence are also in the CSV/JSON.

Original S-list reconciliation

All 196 supplied rows are preserved. The outcomes are 3 current owner corrections, 83 exact source-specific matches and 110 unverified values. 33 original patch families are revised. Numerical status and family judgment are independent.

Original row	Reviewed outcome and resolution
SL001 / Sacramento State Green #043927 / original Black Reviewed patch: Green	Current owner correction. For current owner use, replace the legacy claim with Sac State Green (Sacramento State) #004E38, RGB (0, 78, 56); record S0012. The original value remains preserved, but its historical official status was not authenticated. For the original patch, change the editorial family from Black to Green. This family decision does not authenticate the value.
SL002 / Saddle Brown #8B4513 / original Brown Reviewed patch: Brown	Exact source-specific match. Use the cited source-qualified records S0017, S0020. CSS named keyword; consulted Color 4 document is a Candidate Recommendation Draft.
SL003 / Safety Orange #FF7800 / original Orange Reviewed patch: Orange	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name. A web patch does not demonstrate compliance with a physical safety, transport or lighting color requirement.
SL004 / Safety Orange Blaze Orange #FF6700 / original Orange Reviewed patch: Orange	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name. A web patch does not demonstrate compliance with a physical safety, transport or lighting color requirement.
SL005 / Safety Yellow #EED202 / original Yellow Reviewed patch: Yellow	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name. A web patch does not demonstrate compliance with a physical safety, transport or lighting color requirement.
SL006 / Saffron 1 #F4C430 / original Yellow Reviewed patch: Yellow	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0041, S0042, S0043.
SL007 / Saffron 2 #FEB209 / original Yellow Reviewed patch: Yellow	Exact source-specific match. Use the cited source-qualified record S0043. Informal xkcd survey label; original spelling retained.
SL008 / Sage 1 #87AE73 / original Green Reviewed patch: Green	Exact source-specific match. Use the cited source-qualified record S0060. Informal xkcd survey label; original spelling retained.
SL009 / Sage 2 #BCB88A / original Yellow Reviewed patch: Brown	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0055, S0056, S0057, S0058, S0059, S0060. For the original patch, change the editorial family from Yellow to Brown. This family decision does not authenticate the value.
SL010 / Sage Green #88B378 / original Green Reviewed patch: Green	Exact source-specific match. Use the cited source-qualified record S0074. Informal xkcd survey label; original spelling retained.
SL011 / Salem #177B4D / original Green Reviewed patch: Green	Exact source-specific match. Use the cited source-qualified record S0149. Primary numerical preview checked; physical appearance is not defined by this screen patch. Listed chart: Resene BS5252 range (2008).
SL012 / Salmon #FA8072 / original Orange Reviewed patch: Orange	Exact source-specific match. Use the cited source-qualified records S0155, S0158. CSS named keyword; consulted Color 4 document is a Candidate Recommendation Draft.

Original row	Reviewed outcome and resolution
SL013 / Salmon Pink 1 #FE7B7C / original Pink Reviewed patch: Pink	Exact source-specific match. Use the cited source-qualified record S0179. Informal xkcd survey label; original spelling retained.
SL014 / Salmon Pink 2 #FF91A4 / original Pink Reviewed patch: Pink	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0176, S0177, S0178, S0179.
SL015 / Salmon Rose #E7968B / original Pink Reviewed patch: Pink	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0182, S0183.
SL016 / Samsung Blue #12279E / original Blue Reviewed patch: Blue	Current owner correction. For current owner use, replace the legacy claim with Samsung Blue (Samsung) #1428A0, RGB (20, 40, 160); record S0246. The original value remains preserved, but its historical official status was not authenticated.
SL017 / Sand #E2CA76 / original Brown Reviewed patch: Yellow	Exact source-specific match. Use the cited source-qualified record S0263. Informal xkcd survey label; original spelling retained. For the original patch, change the editorial family from Brown to Yellow. This family decision does not authenticate the value.
SL018 / Sand Brown #CBA560 / original Brown Reviewed patch: Orange	Exact source-specific match. Use the cited source-qualified record S0288. Informal xkcd survey label; original spelling retained. For the original patch, change the editorial family from Brown to Orange. This family decision does not authenticate the value.
SL019 / Sand Dollar #DECDBE / original Brown Reviewed patch: Brown	Exact source-specific match. Use the cited source-qualified record S0300. Dealer approximation; current licensed Pantone numerical value unverified. Columbia Omni Studio approximation; numerical value not independently authenticated by Pantone.
SL020 / Sand Yellow #FCE166 / original Yellow Reviewed patch: Yellow	Exact source-specific match. Use the cited source-qualified record S0378. Informal xkcd survey label; original spelling retained.
SL021 / Sandstone #C9AE74 / original Yellow Reviewed patch: Brown	Exact source-specific match. Use the cited source-qualified record S0344. Informal xkcd survey label; original spelling retained. For the original patch, change the editorial family from Yellow to Brown. This family decision does not authenticate the value.
SL022 / Sandstorm #ECD540 / original Yellow Reviewed patch: Yellow	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0353, S0354, S0355, S0356.
SL023 / Sandy #F1DA7A / original Yellow Reviewed patch: Yellow	Exact source-specific match. Use the cited source-qualified record S0362. Informal xkcd survey label; original spelling retained.
SL024 / Sandy Brown 1 #C4A661 / original Brown Reviewed patch: Orange	Exact source-specific match. Use the cited source-qualified record S0371. Informal xkcd survey label; original spelling retained. For the original patch, change the editorial family from Brown to Orange. This family decision does not authenticate the value.
SL025 / Sandy Brown 2 #F4A460 / original Brown Reviewed patch: Orange	Exact source-specific match. Use the cited source-qualified records S0369, S0370. CSS named keyword; consulted Color 4 document is a Candidate Recommendation Draft. For the original patch, change the editorial family from Brown to Orange. This family decision does not authenticate the value.
SL026 / Sandy Tan #FDD9B5 / original Brown Reviewed patch: Orange	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name. For the original patch, change the editorial family from Brown to Orange. This family decision does not authenticate the value.
SL027 / Sandy Yellow #FDEE73 / original Yellow Reviewed patch: Yellow	Exact source-specific match. Use the cited source-qualified record S0387. Informal xkcd survey label; original spelling retained.
SL028 / Sangria #92000A / original Red Reviewed patch: Red	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0392, S0393, S0394, S0395, S0396.

Original row	Reviewed outcome and resolution
SL029 / Sap Green 1 #507D2A / original Green Reviewed patch: Green	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0427, S0428, S0429, S0430, S0431. The material or historical name has no single universal screen value; consult the contextual references.
SL030 / Sap Green 2 #5C8B15 / original Green Reviewed patch: Green	Exact source-specific match. Use the cited source-qualified record S0431. Informal xkcd survey label; original spelling retained.
SL031 / Sapphire 1 #0F52BA / original Blue Reviewed patch: Blue	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0434, S0435, S0436. The material or historical name has no single universal screen value; consult the contextual references.
SL032 / Sapphire 2 #2138AB / original Blue Reviewed patch: Blue	Exact source-specific match. Use the cited source-qualified record S0436. Informal xkcd survey label; original spelling retained.
SL033 / Sapphire 3 #2D5DA1 / original Blue Reviewed patch: Blue	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0434, S0435, S0436. The material or historical name has no single universal screen value; consult the contextual references.
SL034 / Sapphire Blue #0067A5 / original Blue Reviewed patch: Blue	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0439, S0440.
SL035 / Sasquatch Socks #FF4681 / original Pink Reviewed patch: Pink	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name.
SL036 / Satin Sheen Gold #CBA135 / original Yellow Reviewed patch: Orange	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name. For the original patch, change the editorial family from Yellow to Orange. This family decision does not authenticate the value.
SL037 / Scarlet 1 #BE0119 / original Red Reviewed patch: Red	Exact source-specific match. Use the cited source-qualified record S0554. Informal xkcd survey label; original spelling retained.
SL038 / Scarlet 2 #FD0E35 / original Red Reviewed patch: Red	Exact source-specific match. Use the cited source-qualified record S0551. Primary numerical preview checked; physical appearance is not defined by this screen patch. Current Crayola website preview; not a physical crayon measurement.
SL039 / Scarlet 3 #FF2400 / original Red Reviewed patch: Red	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0549, S0550, S0551, S0552, S0553, S0554.
SL040 / Schauss Pink #FF91AF / original Pink Reviewed patch: Pink	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name.
SL041 / School Bus Yellow #FFD800 / original Yellow Reviewed patch: Yellow	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name. A web patch does not demonstrate compliance with a physical safety, transport or lighting color requirement.
SL042 / Screamin Green #66FF66 / original Green Reviewed patch: Green	Unverified legacy value. Retain only as an explicitly unverified legacy numerical claim; no supporting source for this exact name/value pair was established. Do not infer an official standard from a familiar name.
SL043 / Sea #3C9992 / original Blue Reviewed patch: Green	Exact source-specific match. Use the cited source-qualified record S0636. Informal xkcd survey label; original spelling retained. For the original patch, change the editorial family from Blue to Green. This family decision does not authenticate the value.

Original row	Reviewed outcome and resolution
SL044 / Sea Blue 1 #006994 / original Blue Reviewed patch: Blue	Unverified legacy value. Same-name records exist, but their values differ. Keep this original value unverified; select a replacement only after naming the intended source and code. Candidates: S0643, S0644, S0645, S0646.
SL045 / Sea Blue 2 #047495 / original Blue Reviewed patch: Blue	Exact source-specific match. Use the cited source-qualified record S0646. Informal xkcd survey label; original spelling retained.
SL046 / Sea Green 1 #00FFCD / original Green Reviewed patch: Green	Unverified legacy value. Same-name records exist, but their values differ. SU0205 / Skipper Blue / Pantone TPG / dealer 19-3936 TPG	Source hex and RGB conflict; not admitted. source hex: #55567B; source rgb: [84, 86, 123]; hex from rgb: #54567B Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0206 / Surf the Web / Pantone TPG / dealer 19-3952 TPG	Source hex and RGB conflict; not admitted. source hex: #3E4989; source rgb: [62, 72, 137]; hex from rgb: #3E4889 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0207 / Stretch Limo / Pantone TPG / dealer 19-4005 TPG	Source hex and RGB conflict; not admitted. source hex: #3B3F42; source rgb: [59, 63, 65]; hex from rgb: #3B3F41 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0208 / Salute / Pantone TPG / dealer 19-4011 TPG	Source hex and RGB conflict; not admitted. source hex: #3B3F49; source rgb: [59, 62, 73]; hex from rgb: #3B3E49 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0209 / Sargasso Sea / Pantone TPG / dealer 19-4031 TPG	Source hex and RGB conflict; not admitted. source hex: #485167; source rgb: [71, 81, 103]; hex from rgb: #475167 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0210 / Sailor Blue / Pantone TPG / dealer 19-4034 TPG	Source hex and RGB conflict; not admitted. source hex: #2E4A62; source rgb: [46, 74, 97]; hex from rgb: #2E4A61 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0211 / Snorkel Blue / Pantone TPG / dealer 19-4049 TPG	Source hex and RGB conflict; not admitted. source hex: #1B538F; source rgb: [27, 83, 142]; hex from rgb: #1B538E Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0212 / Skydiver / Pantone TPG / dealer 19-4151 TPG	Source hex and RGB conflict; not admitted. source hex: #1F609E; source rgb: [30, 95, 158]; hex from rgb: #1E5F9E Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0213 / Stargazer / Pantone TPG / dealer 19-4316 TPG	Source hex and RGB conflict; not admitted. source hex: #445A65; source rgb: [68, 89, 100]; hex from rgb: #445964 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0214 / Seaport / Pantone TPG / dealer 19-4342 TPG	Source hex and RGB conflict; not admitted. source hex: #276384; source rgb: [38, 98, 131]; hex from rgb: #266283 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0215 / Shaded Spruce / Pantone TPG / dealer 19-4524 TPG	Source hex and RGB conflict; not admitted. source hex: #286168; source rgb: [40, 96, 104]; hex from rgb: #286068 Resolve from a consistent issuer specification; do not infer from the picture. Source record

Record / source	Observed problem and next step
SU0216 / Storm / Pantone TPG / dealer 19-5217 TPG	Source hex and RGB conflict; not admitted. source hex: #2E6464; source rgb: [45, 100, 100]; hex from rgb: #2D6464 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0217 / Scarab / Pantone TPG / dealer 19-5350 TPG	Source hex and RGB conflict; not admitted. source hex: #3B4443; source rgb: [58, 67, 66]; hex from rgb: #3A4342 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0218 / Sycamore / Pantone TPG / dealer 19-5917 TPG	Source hex and RGB conflict; not admitted. source hex: #3B4D47; source rgb: [58, 77, 70]; hex from rgb: #3A4D46 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0219 / Silver / dulux	Named product page has no explicit numerical color specification. Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0220 / structural-steel / dulux	Source endpoint returned HTTP 404 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0221 / Sunny Day Out / nerolac	Malformed issuer hex: #AODCE5 Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0222 / Shade / resene	Issuer supplies no hexadecimal preview; RGB is absent or a zero placeholder. No color inferred from the image. Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0223 / Shore Thing / resene	Issuer supplies no hexadecimal preview; RGB is absent or a zero placeholder. No color inferred from the image. Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0224 / Sandy / resene	Issuer supplies no hexadecimal preview; RGB is absent or a zero placeholder. No color inferred from the image. Resolve from a consistent issuer specification; do not infer from the picture. Source record
SU0225 / Stinger Green / Sacramento State	The official graphic prints #008064 and RGB (0, 132, 83), which is #008453. Both are preserved as conflicting claims; neither is admitted as the resolved value. hex: #008064; rgb: [0, 132, 83] Resolve from a consistent issuer specification; do not infer from the picture. Source record

References and evidence notes

References were checked October 19, 2026 unless their version/date is explicitly part of the source identity. Per-record links supply individual product evidence. The original S list and May 26, 2026 audit were user-provided inputs; their claims were reviewed, not treated as primary standards.
